Cat 5 High-Density KVM Over the NET™
KH1508i / KH1516i
User Manual
FCC Information

This is an FCC Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

RoHS

This product is RoHS compliant.

User Notice
All information, documentation, and specifications contained in this manual are subject to change without prior notification by the manufacturer. The manufacturer makes no representations or warranties, either expressed or implied, with respect to the contents hereof and specifically disclaims any warranties as to merchantability or fitness for any particular purpose. Any of the manufacturer's software described in this manual is sold or licensed 'as is'. Should the programs prove defective following their purchase, the buyer (and not the manufacturer, its distributor, or its dealer), assumes the entire cost of all necessary servicing, repair and any incidental or consequential damages resulting from any defect in the software.

The manufacturer of this system is not responsible for any radio and/or TV interference caused by unauthorized modifications to this device. It is the responsibility of the user to correct such interference.

The manufacturer is not responsible for any damage incurred in the operation of this system if the correct operational voltage setting was not selected prior to operation. PLEASE VERIFY THAT THE VOLTAGE SETTING IS CORRECT BEFORE USE.
Package Contents

The KH1508i / KH1516i package consists of:

1 KH1508i or KH1516i Cat 5 High-Density KVM Over the NET™ Switch
1 Firmware Upgrade Cable
1 Power Cord
1 Rack Mount Kit
1 Foot Pad Set (4 pcs.)
1 User Manual*
1 Quick Start Guide

Check to make sure that all of the components are present and in good order. If anything is missing, or was damaged in shipping, contact your dealer.

Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the switch or to any other devices on the KH1508i / KH1516i installation.

* Features may have been added to the KH1508i / KH1516i since this manual was printed. Please visit our website to download the most up-to-date version of the manual.

About This Manual

This User Manual is provided to help you get the most from your KH1508i / KH1516i system. It covers all aspects of installation, configuration and operation. An overview of the information found in the manual is provided below.

Overview

Chapter 1, Introduction, introduces you to the KH1508i / KH1516i system. Its purpose, features and benefits are presented, and its front and back panel components are described.

Chapter 2, Hardware Setup, describes how to set up your installation. The necessary steps – from a basic single stage hookup to a complete 16 switch daisy chained operation are provided.

Chapter 3, Basic Operation, explains the fundamental concepts involved in operating the KH1508i / KH1516i.

Chapter 4, Local Console Operation, describes the concepts and procedures used to operate the KH1508i / KH1516i from a locally connected KVM console.

Chapter 5, Browser Login, explains how to log into the KH1508i / KH1516i with your browser, and explains the functions of the icons and buttons on the KH1508i / KH1516i web page.

Chapter 6, Administration and Configuration, describes how to administer the KH1508i / KH1516i after logging in from a browser.

Chapter 7, Windows Client Port Operation, explains how to connect to the KH1508i / KH1516i with the Windows Client software, and describes how to use the OSD to access and control the computers connected to the switch.

Chapter 8, The Java Client Control Panel, describes how to connect to the KH1508i / KH1516i with the Java Client software, and explains how to use the OSD to access and control the computers connected to the switch.

Chapter 9, The Log File, shows how to use the log file utility to view all the events that take place on the KH1508i / KH1516i.

Chapter 10, The Log Server, explains how to install and configure the Log Server.

Chapter 11, AP Operation, describes how to operate the KH1508i / KH1516i using Windows and Java Client application programs, rather than with the browser method.
Chapter 12, Keyboard Emulation, provides tables that list the PC to Mac and PC to Sun keyboard emulation mappings.

An Appendix, provides specifications and other technical information regarding the KH1508i / KH1516i.

Conventions
This manual uses the following conventions:

Monospaced Indicates text that you should key in.

[ ] Indicates keys you should press. For example, [Enter] means to press the Enter key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: [Ctrl+Alt].

1. Numbered lists represent procedures with sequential steps.

♦ Bullet lists provide information, but do not involve sequential steps.

→ Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start → Run means to open the Start menu, and then select Run.

⚠ Indicates critical information.

Product Information

Chapter 1
Introduction

Overview

The KH1508i / KH1516i KVM Switches are control units that allow access to multiple computers from a single KVM (keyboard, monitor, and mouse) console.

A single KH1508i / KH1516i can control up to 8 / 16 computers. As many as 15 additional KH1508 / KH1516 switches can be daisy chained from the original unit, so that up to 256 computers can all be controlled from the original KVM console.

Note: Aten ACS1208 / ACS1216 switches can also be installed on a KH1508i / KH1516i daisy chain.

Since the KH1508i / KH1516i uses TCP/IP for its communications protocol, it can be accessed from any computer on the Net - whether that computer is located down the hall, down the street, or half-way around the world.

In addition to TCP/IP connectivity, the KH1508i / KH1516i provides KVM ports for a locally attached PS/2 console – allowing access and control from the data center as well as over the Net. The switches utilize a single shared bus implementation – although they support local and remote login at the same time, they do not support independent operation. If a local user logs in while a remote user has already opened a session, the local user sees the same screen that the remote user is working on.
For local access, the KH1508i / KH1516i supports resolutions of up to 1600 x 1200, as well as 1280 x 1024 @ 75Hz for an extended distance of up to 40 m. For remote access, the switches support up to 1280 x 1024 @ 75Hz.

The switches feature RJ-45 connectors and CAT 5 cable to link to the computers. Utilizing PS/2, USB, and serial KVM Adapter Cables for the final linkup, the KH1508i / KH1516i permits any combination of PCs, Macs, Sun computers, and serial devices to coexist on the installation. Use of the adapter cables dramatically reduces cable clutter, and makes reconfiguring the installation easy and convenient.

A custom ASIC (patent pending) provides an auto-sensing function that recognizes the position of each station on the chain, eliminating the need to manually set the position with DIP switches. A seven segment front panel LED displays each Station's position for easy identification.

The KH1508i / KH1516i has been designed to work seamlessly with the ALTUSEN CC1000 Control Center Over the NET™ for ease of access and administration. It also allows the IP address configuration to be easily configured from the local console OSD.

Your KH1508i / KH1516i investment is protected by a firmware upgrade utility. You can stay current with the latest improvements in functionality by downloading firmware update files from our website, and using the utility to quickly and conveniently install them.

Setting up the KH1508i / KH1516i is fast and easy; plugging cables into their appropriate ports is all that is entailed. Because the KH1508i / KH1516i intercepts keyboard and mouse input directly, there is no software to configure; no need to get involved in complex installation routines; no need to be concerned with incompatibility problems.

Access to any computer on the installation is easily accomplished--either by pressing front panel port selection switches; entering hotkey combinations from the keyboard; or by means of a powerful menu driven OSD (On Screen Display) system. A convenient Auto Scan function also permits automatic scanning and one-by-one monitoring of the activities of selected computers.

There is no better way to save time and money than with a KH1508i / KH1516i installation. By allowing a single console to manage up to 256 computers, a KH1508i / KH1516i installation: (1) eliminates the expense of having to purchase a separate keyboard, monitor, and mouse for each; (2) saves all the space those extra components would take up; (3) saves on energy costs; and (4) eliminates the inconvenience and wasted effort involved in constantly moving from one computer to another.
Chapter 1. Introduction

Features

- A single console controls up to 8 (KH1508i) or 16 (KH1516i) computers
- Dedicated chain ports - daisy chain up to 15 additional units - control up to 256 computers from a single console
- Extends the distance between computers and switch - up to 30m for resolutions of 1600 x 1200 @ 60Hz; up to 40 m for resolutions of 1280 x 1024 @ 75Hz
- Custom ASIC (patent pending) auto-senses station's position on daisy chained installations - no need for manual DIP switch setting - front panel LED indicates station's position – port names automatically reconfigured in the OSD when the station sequence changes
- Multiplatform support: PC, Mac, Sun and terminal-based systems
- Remote access via LAN, WAN, or the Internet – control your installation from down the hall, down the street, or half-way around the world – supports 10Base-T, 100Base-T, TCP/IP, HTTP
- Allows the creation of up to 64 user accounts
- Advanced security – password protection and advanced encryption technologies
- Windows and Java-based client software – Java client provides support for most major operating platforms
- No software required – convenient computer selection via port selection switches, hotkeys and intuitive On Screen Display (OSD) menus
- Auto Scan feature for monitoring user-selected computers
- Hot Pluggable - add or remove switches/computers without having to power down the switches
- Two level logout - Manual and Timed
- Upgradeable firmware
- PS/2 keyboard and mouse emulation – computers boot even when the console focus is elsewhere
- Superior video quality – supports resolutions up to 1600 x 1200
- Rack Mountable in 19” System Rack (1U)
Requirements

General
- For best results, we recommend that the computers used to access the KH1508i / KH1516i have at least a P III 1 GHz processor, and that their screen resolution is set to 1024 x 768
- For best results, we recommend an Internet connection speed of at least 128 kbps
- Browsers must support 128 bit data encryption
- To run the Windows client, you must have DirectX 7.0 or higher installed
- To run the Java client, you must have Sun’s Java 2 (1.4 or higher) installed
- To run the Log Server, you must have the Microsoft Jet OLEDB 4.0 (or higher) driver installed

Console
- A VGA, SVGA, or Multisync monitor capable of the highest resolution that you will be using on any computer in the installation.
- A PS/2 style mouse
- A PS/2 style keyboard

Computers
The following equipment must be installed on the computers that connect to the KH1508i or KH1516i's KVM ports:
- A VGA, SVGA or Multisync port
- A Type A USB port and USB host controller (for USB KVM Adapter Cable Connection, see below)
- 6-pin mini-DIN keyboard and mouse ports (for PS/2 KVM Adapter Cable Connection, see below)
KVM Adapter Cables

- Cat 5 (or higher) cable is required to connect the KH1508i / KH1516i to a KVM Adapter Cable (see Single Station Installation, page 12).
- The following KVM Adapter Cables are required for use with the KH1508i / KH1516i:

<table>
<thead>
<tr>
<th>Function</th>
<th>Module</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connect to devices with PS/2 ports</td>
<td>KA9520</td>
</tr>
<tr>
<td>Connect to devices with USB ports</td>
<td>KA9570</td>
</tr>
<tr>
<td>Connect to Sun Legacy systems (with 13W3 port)</td>
<td>KA9130</td>
</tr>
<tr>
<td>Connect to Sun USB systems</td>
<td>KA9131</td>
</tr>
<tr>
<td>Connect to serial based devices</td>
<td>KA9140</td>
</tr>
</tbody>
</table>

Supported Operating Systems

The following operating systems are supported by the KH1508i / KH1516i:

<table>
<thead>
<tr>

Front View

KH1508i

KH1516i
### Chapter 1. Introduction

#### No. | Component | Description
---|---|---
1 | Port Selection Switches | - Press a switch to give the KVM focus to the computer attached to its corresponding port.
- Simultaneously pressing Buttons 1 and 2 for 3 seconds performs a Keyboard and Mouse Reset.
- Simultaneously pressing Buttons 7 and 8 starts Auto Scan Mode.

2 | Port LEDs | The Port LEDs are built into the Port Selection Switches. The left ones are the On Line LEDs; the right ones are the Selected Port LEDs:
- An ONLINE LED lights GREEN to indicate that the computer attached to its corresponding port is up and running. A flashing LED indicates that the Port is being used for cascading to another switch.
- A SELECTED LED lights ORANGE to indicate that the computer attached to its corresponding port is the one that has the KVM focus. The LED is steady under normal conditions, but flashes when its port is accessed under Auto Scan Mode.

3 | Reset Switch | Pressing this switch in performs a system reset.
**Note:** The switch is recessed and must be pushed with a thin object - such as the end of a paper clip, or a ballpoint pen.

4 | Firmware Upgrade Recovery Switch | During normal operation and while performing a firmware upgrade, this switch should be in the NORMAL position. If a firmware upgrade operation does not complete successfully, this switch is used to perform a firmware upgrade recovery.
**Note:** This is only for performing a local firmware upgrade (see *Firmware Upgrade Recovery*, page 45) for details.

5 | Firmware Upgrade Port | The Firmware Upgrade Cable that transfers the firmware upgrade data from the administrator’s computer to the KH1508i / KH1516i (see page 40), plugs into this RJ-11 connector.
**Note:** This is only for performing a local firmware upgrade (see *Firmware Upgrade Recovery*, page 45) for details.

6 | Power LED | Lights to indicate that the KH1508i / KH1516i is powered up and ready to operate.

7 | Station ID LED | The KH1508i / KH1516i’s Station ID is displayed here. If this is a Single Station installation (see page 12), or the First Station on a Daisy Chained installation (see page 15), the KH1508i / KH1516i has a Station ID of 01.

On a Daisy Chained installation, the KH1508i / KH1516i auto-senses its position and displays the Station ID that corresponds to its place in the chain. (see *Port ID Numbering*, page 19, for details).

Chapter 2

Hardware Setup

Overview

For convenience and flexibility that allows mixing the PS/2, USB, and serial device interfaces, as well as multiple platforms, the KH1508i / KH1516i's design utilizes KVM Adapter Cables (CPU Modules), that serve as intermediaries between the switch and the connected devices (refer to the installation diagram on page 13).

A separate KVM Adapter Cable is required for each computer or device connection. See *KVM Adapter Cables*, page 5 for the model numbers.

Before You Begin

1. Important safety information regarding the placement of this device is provided on page 139. Please review it before proceeding.

2. Make sure that power to all the devices you will be connecting up have been turned off. You must unplug the power cords of any computers that have the Keyboard Power On function.
Stacking and Rack Mounting

The KH1508i / KH1516i can be stacked on the desktop or rack mounted at the front or rear of the rack. The following sections take you through the procedures for each method.

Stacking

The KH1508i / KH1516i can be placed on any appropriate level surface that can safely support its weight plus the weight of its attached cables. To place the KH1508i / KH1516i, or to stack units if you are daisy chaining them, remove the backing material from the bottom of the rubber feet that came with this package, and stick them onto the switch’s bottom panel at the corners, as shown in the diagram, below:

Note: To ensure adequate ventilation, allow at least 5.1 cm on each side, and 12.7 cm at the back for power cord and cable clearance.
Chapter 2. Hardware Setup

Rack Mounting

The KH1508i / KH1516i can be mounted in a 19" (1U) rack. The mounting brackets can screw into either the front or the back of the unit so that it can attach to the front or the back of the rack. To rack mount the unit:

1. Remove the screws at the front or the rear, as shown in the diagram below.

2. Screw the mounting brackets into the sides of the unit at the front or the rear, as shown in the diagram below.

3. Slide the unit into the front or rear of the rack and secure it to the rack.
Single Station Installation

In a Single Stage installation, there are no additional KVM switches daisy chained down from the KH1508i / KH1516i. To set up a single stage installation, refer to the installation diagrams starting on page 13 (the numbers in the diagram correspond with the numbers of the instruction steps), and do the following:

1. Plug your Local Console’s keyboard, monitor, and mouse into the unit’s Console Ports. Each port is color coded and marked with an appropriate icon to identify itself.

   **Note:** The KH1508i / KH1516i does not support distances that exceed 20m between itself and the local monitor.

2. Use Cat. 5 cable to connect any available KVM port to a KVM Adapter Cable that is appropriate for the computer you are installing (see KVM Adapter Cables, page 5 for details).

   **Note:** The KH1508i / KH1516i does not support distances that exceed 40m between itself and the KVM Adapter Cable.

3. Connect the KVM Adapter Cable to the computer.
   Plug the connectors on the KVM Adapter Cable into the appropriate ports of the computer you are installing. (See KVM Adapter Cable Installation Diagrams, page 14 for connection examples.)

4. Plug the LAN or WAN cable into the KH1508i / KH1516i’s LAN port.

5. Plug the female end of the power cord into the KH1508i / KH1516i’s Power Socket; plug the male end into an AC power source.

6. Turn on the power to the KH1508i / KH1516i.

   After the KH1508i / KH1516i is powered up, you can turn on the computers.
Chapter 2. Hardware Setup

Single Stage Installation Diagram
Chapter 2. Hardware Setup

Daisy Chaining

Up to 15 additional KH1508 / KH1516 KVM switches can be daisy chained down from the KH1508i or KH1516i. As many as 256 computers can be controlled from a single console in a complete installation.

Note: Aten ACS1208 / ACS1216 switches can also be installed on a KH1508i / KH1516i daisy chain.

To set up a daisy chained installation, do the following:

1. Use a daisy chain cable set to connect the Chain Out port of the parent unit to the Chain In port of the child unit (First Station Out to Second Station In, Second Station Out to Third Station In, etc.).

Note: 1. The KH1508i / KH1516i doesn’t have a Chain In port since it is the highest level parent – it only has a Chain Out port.

2. Daisy chain cable sets require a separate purchase – see your dealer for details.

3. The KH1508i / KH1516i does not support distances that exceed 100m between the first station and the last station.

2. Use Cat. 5 cable to connect any available KVM port to a KVM Adapter Cable that is appropriate for the computer you are installing (see KVM Adapter Cables, page 5 for details).

Note: The switches do not support distances that exceed 40 m between themselves and the KVM Adapter Cable.

3. Connect the KVM Adapter Cable to the computer. Refer to the installation diagram on the previous page for details.

4. Use the power cord supplied with this package to connect the KVM switch to an AC power source.

5. Repeat steps 1–4 for any other switches you want to add to the chain.
6. Power up the installation according to the following procedure:
   a) Power up the First Station. Wait for the unit to ascertain its Station ID and display it on the Station ID LED. (The Station ID for the First Stage unit is 01, the ID for the Second Stage unit is 02, the ID for the Third Stage unit is 03, etc.)
   
b) Power on each station in turn (Second Station, then Third Station, etc.). In each case, wait for the Station ID to be ascertained and displayed before powering on the next station.
   
c) After all the Stations are up, power on the computers.

**Daisy Chain Installation Diagram**
Chapter 3
Basic Operation

Port Selection

KH1508i / KH1516i installations provide three methods to obtain instant access to any computer in your installation: Manual, OSD, and Hotkey.

Manual
For manual port selection, simply press the Port Switch that corresponds to the device you wish to access.

OSD
OSD (On Screen Display), provides a menu driven interface to the computer switching procedure. The KH1508i / KH1516i provides two OSD systems: A text-based OSD when you log in from a local console; and a graphical OSD when you log in remotely over the internet. Local console OSD operation is discussed in the next chapter; graphical OSD operation is discussed in Chapter 7 (for Windows logins) and Chapter 8 (for Java logins).

Keyboard Hotkeys
Hotkeys allow you to conveniently provide KVM focus to a particular computer from the local console keyboard, instead of having to manually select them by pressing Port Selection switches. See Keyboard Port Operation, page 34, for details.
Hot Plugging

The KH1508i / KH1516i supports hot plugging – components can be removed and added back into the installation by unplugging and replugging their cables from their ports without the need to shut the unit down. In order for hot plugging to work properly, however, the procedures described below must be followed.

Hot Plugging Stations
You can switch station positions by simply unplugging from the old parent and plugging into a new one. After you do, in order for the OSD menus to correspond to the change, you must reset the OSD. See RESET STATION IDS, page 29, for details.

Hot Plugging KVM Ports
After switching KVM ports, in order for the OSD menus to correspond to the change, you must manually reconfigure the OSD information for the new Port information. See F3 SET, page 26, and the Port Setting selections under the F4 ADM function, page 29, for details.

Note: If the computer’s Operating System doesn’t support hot plugging, this function may not work properly.

Hot Plugging Console Ports:
Keyboard, monitor, and mouse can all be hot plugged. When hot plugging the mouse:
• You may unplug the mouse and plug it back in again (to reset the mouse, for example), as long as you use the same mouse.
• If you plug in a different mouse, all the stations and all the computers on the installation must be shut down for 10 seconds, then restarted following the Power Up Sequence described under Step 6 on page 16.)

Note: If, after hot plugging (or at any other time), there is no response to keyboard and/or mouse input, perform a Keyboard and Mouse Reset by pressing in the Reset switch (see page 7).
Chapter 3. Basic Operation

Powering Off and Restarting

If it becomes necessary to power off the KH1508i / KH1516i, or if the switch loses power and needs to be restarted, before starting it back up you must follow these procedures:

1. Shut down all the computers that are attached to it.
   
   **Note:** You must unplug the power cords of any computers that have the Keyboard Power On function.

2. Wait 10 seconds then power it back on. If you have shut down more than one station, power up the highest station first and work your way down to the lowest one. Wait for each station to display its Station ID on the front panel LED before powering on the next one.

3. After the station(s) is (are) up, power the computers back on.

Port ID Numbering

Each computer on the installation is assigned a unique Port ID. The Port ID is a one or two segment number that is determined by the Stage Level and KVM Port number of the KVM switch that the computer is connected to.

The first segment represents the KVM Port number of the First Stage unit; the second segment represents the KVM Port number of the Second Stage unit.

A computer attached to a First Stage unit has a one segment Port ID (from 1-16) that corresponds to the KVM Port number that it is connected to.

A computer attached to a Second Stage unit has a two segment Port ID:

- The second segment (from 1-16), represents the KVM Port number on the Second Stage unit that the computer is connected to. The first segment (from 1-16) represents the KVM Port number on the First Stage unit that the Second Stage unit links back to.

- For example, a Port ID of 12 - 3 refers to a computer that is connected to KVM Port 3 of a Second Stage unit that links back to KVM Port 12 of the First Stage unit.
Chapter 4
Local Console Operation

Overview

When setting up your KH1508i / KH1516i installation for the first time, we recommend doing it from the local console. Local console operation offers a menu driven On Screen Display (OSD) to handle computer control and switching operations.

All procedures start from the OSD Main Screen. To pop up the Main Screen, tap [Scroll Lock] twice.

Note: [Scroll Lock] is the default OSD hotkey. You can optionally change the Hotkey to the Ctrl key (see OSD HOTKEY, page 26).

The login screen appears:

Enter a valid Username and password to continue.

Note: 1. The default username is administrator; the default password is password. The first time you log in, you must use these defaults. For security purposes, we strongly recommend that you change the default password to something unique.

2. Usernames and passwords cannot be managed from the local console. User management is handled via remote administration. See User Management, page 65 for details.
The OSD Main Screen

After you successfully log in, a screen similar to the one below appears:

Note: 1. The screen depicts the Administrator's Main Screen. The User Main Screen does not show the F4 or F6 function since it is reserved for the Administrator and can't be accessed by ordinary Users.

2. The OSD always starts in List view, with the highlight bar at the same position it was in the last time it was closed.

3. Only the ports that have been set accessible by the Administrator for the currently logged in User are visible (see Port Access, page 67, for details).
Chapter 4. Local Console Operation

**OSD Navigation**

- To dismiss the menu, and deactivate the OSD, Click the **X** at the upper right corner of the OSD Window; or press **[Esc]**.
- To Logout, Click **F8** or the **ZZZ** symbol at the top of the Main Screen, or press **[F8]**.
- The OSD uses a tree view. To see the ports for a particular station, click the plus sign [+] in front of the Station Number or move the Highlight Bar to the station then press [Enter]. The Port Number list drops down. To dismiss the list, click the circle symbol [o] in front of the Station Number.
- To move up or down through the list one line at a time, Click the Up and Down Triangle symbols (▲▼) or use the Up and Down Arrow Keys. If there are more list entries than there is room for on the Main Screen, the screen will scroll.
- To move up or down through the list one screen at a time, Click the Up and Down Arrow symbols (▲▼), or use the [Pg Up] and [Pg Dn] keys. If there are more list entries than there is room for on the Main Screen, the screen will scroll.
- To bring the KVM focus to a port, Double Click it, or move the Highlight Bar to it then press [Enter].
- After executing any action, you automatically go back to the menu one level above.

**OSD Main Screen Headings**

<table>
<thead>
<tr>
<th>Heading</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>SN-PN</td>
<td>This column lists the Port ID numbers (Station Number - Port Number) for all the Computer Ports on the installation. The simplest method to access a particular computer is move the Highlight Bar to the port entry, then press <strong>Enter</strong>.</td>
</tr>
<tr>
<td>QV</td>
<td>If a port has selected for Quick View scanning (see SET QUICK VIEW PORTS, page 28), an arrowhead displays in this column to indicate so.</td>
</tr>
<tr>
<td>☀</td>
<td>The computers that are powered on and are On Line have a Sun symbol in this column to indicate so.</td>
</tr>
<tr>
<td>NAME</td>
<td>If a port has been given a name (see EDIT PORT NAMES, page 29), its name appears in this column.</td>
</tr>
</tbody>
</table>
OSD Functions

OSD functions are used to configure and control the OSD. For example, rapidly switching to any port; scanning only selected ports; limiting the list of ports you wish to view; designating a port as a Quick View Port; managing port names; or making OSD setting adjustments.

To access an OSD function:
1. Either Click a Function Key field at the top of the Main Screen, or press a Function Key on the keyboard.
2. In the Submenus that appear make a choice by either double clicking it, or by moving the Highlight Bar to it, and pressing [Enter].
3. Press [Esc] to return to the previous menu level.

F1 GOTO

GOTO allows you to switch directly to a port either by keying in the port's Name, or its Port ID.
- To use the Name method, key in 1; key in the port's Name; then press [Enter].
- To use the Port ID method, key in 2; key in the Port ID; then press [Enter].

Note: 1. You can key in a partial Name or Port ID. In that case, the screen will show all the computers that the User has View rights to, that match the Name or Port ID pattern, regardless of the current List settings (see F2 LIST, page 25, for details).
2. Port access rights are assigned via the remote OSD. See Port Access, page 67, for details.

To return to the OSD Main Screen without making a choice, press [Esc].
Chapter 4. Local Console Operation

**F2 LIST**

This function lets you broaden or narrow the scope of which ports the OSD displays (lists) on the Main OSD Screen. Many of the OSD functions only operate on the computers that are listed on the Main OSD Screen. The submenu choices and their meanings are given in the table below:

<table>
<thead>
<tr>
<th>Choice</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
<td>Lists all of the ports on the installation.</td>
</tr>
<tr>
<td>POWERED ON</td>
<td>Lists only the ports that have their attached computers Powered On.</td>
</tr>
<tr>
<td>QVIEW</td>
<td>Lists only the ports that have been selected as Quick View Ports</td>
</tr>
<tr>
<td></td>
<td>(see SET QUICK VIEW PORTS, page 28).</td>
</tr>
<tr>
<td>QVIEW + POWERED ON</td>
<td>Lists only the ports that have been selected as Quick View Ports</td>
</tr>
<tr>
<td></td>
<td>(see SET QUICK VIEW PORTS, page 28, and that have their</td>
</tr>
<tr>
<td></td>
<td>attached computers Powered On.</td>
</tr>
</tbody>
</table>

Move the Highlight Bar to the choice you want, then press [Enter]. An icon appears before the choice to indicate that it is the currently selected one.
F3 SET

This function allows the Administrator and each User to set up their own working environment. A separate profile for each is stored by the OSD and is activated according to the Username that is provided during Login.

To change a setting:

1. Move the highlight bar to it, then press [Enter].

2. After you select an item, a submenu with further choices appears. To make a selection, move the Highlight Bar to it, then press [Enter]. An icon appears before the selected choice to indicate which one it is. The settings are explained in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSD HOTKEY</td>
<td>Selects which Hotkey activates the OSD function: [Scroll Lock] [Scroll Lock] or [Ctrl] [Ctrl]. Since the Ctrl key combination may conflict with programs running on the computers, the default is the Scroll Lock combination.</td>
</tr>
<tr>
<td>PORT ID DISPLAY POSITION</td>
<td>Allows you to position where the Port ID appears on the monitor. The default is the upper left corner, but you can have it appear anywhere on the screen. Use the Arrow Keys plus Pg Up, Pg Dn, Home, End, and 5 (on the numeric keypad with Num Lock off), to position the Port ID display, then press [Enter] to lock the position and return to the Set submenu.</td>
</tr>
<tr>
<td>PORT ID DISPLAY DURATION</td>
<td>Determines how long a Port ID displays on the monitor after a port change has taken place. The choices are: User Defined - which lets you select the amount of time (from 0–255 sec.); and Always On - which displays the Port ID at all times. If you select User Defined, key in the number of seconds, then press [Enter]. The default is 5 Seconds. A setting of 0 (zero) disables this function.</td>
</tr>
<tr>
<td>PORT ID DISPLAY MODE</td>
<td>Selects how the Port ID is displayed: the Port Number alone (PORT NUMBER); the Port Name alone (PORT NAME); or the Port Number plus the Port Name (PORT NUMBER + PORT NAME). The default is PORT NUMBER + PORT NAME.</td>
</tr>
</tbody>
</table>

(Continues on next page.)
Chapter 4. Local Console Operation

(Continued from previous page.)

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCAN DURATION</td>
<td>Determines how long the focus dwells on each port as it cycles through the selected ports in Auto Scan Mode (see F7 SCAN, page 32). Key in a value from 0–255 seconds, then press [Enter]. Default is 10 seconds; a setting of 0 disables the Scan function.</td>
</tr>
</tbody>
</table>
| SCAN/SKIP MODE        | Selects which computers will be accessed under Skip Mode (see F5 SKP, page 31), and Auto Scan Mode (see F7 SCAN, page 32). Choices are:  
  - ALL - All the Ports which have been set Accessible (see Port Access, page 67);  
  - POWERED ON - Only those Ports which have been set Accessible and are Powered On;  
  - QUICK VIEW - Only those Ports which have been set Accessible and have been selected as Quick View Ports (see SET QUICK VIEW PORTS, page 28);  
  - QUICK VIEW + POWERED ON - Only those Ports which have been set Accessible and have been selected as Quick View Ports and are Powered On.  
  The default is ALL. |
| SCREEN BLANKER        | If there is no input from the console for the amount of time set with this function, the screen is blanked. Key in a value from 0–30 minutes, then press [Enter]. A setting of 0 disables this function. The default is 0 (disabled). |
| HOTKEY COMMAND MODE   | Enables / Disables the Hotkey Command function in case a conflict with programs running on the computers occurs. The default is ON. |
| HOTKEY                | This setting selects the Hotkey invocation keys (see Keyboard Port Operation, page 34). Choices are:  
  - [Num Lock] + [–] or [Ctrl] + [F12]  
  The default is [Num Lock] + [–]. |
| SET LOGOUT TIMEOUT    | If there is no input from the console for the amount of time set with this function, the Operator is automatically logged out. A login is necessary before the console can be used again. This enables other Operators to gain access to the computers when the original Operator is no longer accessing them, but has forgotten to log out. To set the timeout value, key in a number from 0–180 minutes, then press [Enter]. If the number is 0 (zero), this function is disabled. Default is 0 (disabled). |

(Continues on next page.)
### Setting | Function
--- | ---
**ACTIVATE BEEPER** | Choices are **Y** (for Yes), or **N** (for No). When activated, the beeper sounds whenever a Port is changed, when activating the Auto Scan function (see \textit{F7 SCAN}, page 32), or an invalid entry is made on an OSD menu. The default is **Y** (activated).

**SET QUICK VIEW PORTS** | This function lets the Administrator select which Ports to include as Quick View ports.
- To select/deselect a port as a Quick View Port, use the Navigation Keys to move the highlight bar to it, then press the [Spacebar].
- When a port has been selected as a Quick View Port, an arrowhead displays in the QV column of the LIST on the Main Screen to indicate so. When a port is deselected, the arrowhead disappears.
- If one of the Quick View options is chosen for the LIST view (see \textit{F2 LIST}, page 25), only a Port that has been selected here will display on the List.
- If one of the Quick View options is chosen for Auto Scanning (see \textit{SCAN/SKIP MODE}, page 27), only a Port that has been selected here will be Auto Scanned.

The default is for no ports to be selected.
F4 ADM

F4 is an Administrator only function. It allows the Administrator to configure and control the overall operation of the OSD. To change a setting use the Up and Down Arrow Keys to move the highlight bar to it then press [Enter].

After you select an item, a submenu with further choices appears. Move the Highlight Bar to the choice you want, then press [Enter]. An icon appears before the selected choice so that you know which one it is. The settings are explained in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
</table>
| EDIT PORT NAMES          | To help remember which computer is attached to a particular port, every port can be given a name. This function allows the Administrator to create, modify, or delete port names. To Edit a port name:  
   1. Click the port you want, or use the Navigation Keys to move the highlight bar to it, then press [Enter].  
   2. Key in the new Port Name, or modify/delete the old one. The maximum number of characters allowed for the Port Name is 12. Legal characters include:  
      - All alpha characters: A–Z*  
      - All numeric characters: 0–9  
      - - and Space  
   3. When you have finished editing, press [Enter] to have the change take effect. To abort the change, press Esc. |
| RESTORE DEFAULT VALUES   | This function is used to undo all changes and return the setup to the original factory default settings (see OSD Factory Default Settings, page 153) except for the Names settings that were assigned to the Ports, which are saved. |
| CLEAR THE NAME LIST      | This function is similar to Restore Default Values. The difference is that it also clears the Names settings along with undoing all changes and returning the setup to the original factory default settings. |
| RESET STATION IDS        | If you change the position of one of the Stations in the daisy chain, the OSD settings will no longer correspond to the new situation. This function directs the OSD to rescan the Station positions of the entire installation and updates the OSD so that the OSD Station information corresponds to the new physical layout.  
   **Note:** Only the Station Numbers get updated. Except for the Port Names, all Administrator settings (such as Set Accessible Ports, Set Quick View Ports, etc.), for all of the computers affected by the change, have to be manually redone. |

(Continues on next page.)
### Setting OPERATING SYSTEM

Specifies the operating platform of the computer attached to each port. For each port, press the [Spacebar] to cycle through the choices (PC, Mac, Sun, and Other). Repeat until all the ports have been set, then press [Esc]. The default is PC.

**Note:** If you are installing a Sun or Mac computer, before you run it for the first time you must set the correct operating system for the port it is connected to with this function; otherwise, it will not boot.

### SET CAT 5 LENGTH

Lets you specify how long the Cat 5 cable between the port and the KVM adapter cable is. Press [Spacebar] to cycle through the cable length settings:

- **S**: Short – for up to 25 m
- **M**: Medium – for between 20 and 40 m
- **L**: Long – for above 35 m

An S, M, or L appears next to the port to indicate the choice.

### SET KEYBOARD LANGUAGE

Sets the keyboard language layout for the computers attached to each port. Press [Spacebar] to cycle through the choices: English (US); English (UK); French; German; Japanese; Korean; Traditional Chinese; and Spanish. The default is English (US).

### FIRMWARE UPGRADE

In order to upgrade the KH1508i / KH1516i’s firmware (see KH1508i / KH1516i Upgrade, page 40) you must first enable **Firmware Upgrade Mode** with this setting.

When you bring up this menu, the current firmware version levels display. Select Y to enable Firmware Upgrade Mode, or N to leave this menu without enabling it.

### ADAPTER UPGRADE

In order to upgrade an Adapter Cables’ firmware (see Adapter Cable Upgrade, page 46), you must first enable its Upgrade Mode with this setting. Press [Spacebar] to select the KVM Adapter Cable you want to upgrade.

When you select a KVM Adapter Cable, its current firmware version levels display. Select Y to enable Firmware Upgrade Mode, or N to leave this menu without enabling it.
F5 SKP

This function enables you to easily skip backward or forward, switching the console focus from the currently active KVM Port to the previous or next available one.

- The selection of computers to be available for Skip Mode switching is made with the Scan/Skip Mode setting under the F3 SET function (see page 26).
- When you are in Skip Mode, press:
  - To skip from the current port to the previous port in the List.
  - To skip from the current port to the next port in the List.
  - To skip from the current port to the last port of the previous station in the List.
  - To skip from the current port to the first port of the next station in the List.

**Note:** When you Skip, you only Skip to the previous or next available computer that is in the Scan/Skip Mode selection (see page 27).

- If a Port has been selected for Scan/Skip Mode, when the focus switches to that port a Left/Right Triangle symbol appears before its Port ID Display to indicate so.
- While Skip Mode is in effect, the console will not function normally. You must exit Skip Mode in order to regain control of the console.
- To exit Skip Mode, press the [Spacebar] or [Esc].
This function allows you to select whether to assign the KH1508i / KH1516i’s IP address dynamically (DHCP), or to give it a fixed IP address. Press [Enter] to toggle between the choices.

If you toggle DHCP Enable to Off, specify the IP, Mask, and Gateway in the appropriate fields.

Press [Esc] to exit after you have finished with your choice.

Pressing [F7] invokes Auto Scan Mode. This function allows you to automatically switch among the available computers at regular intervals so that you can monitor their activity without having to take the trouble of switching manually.

- The selection of computers to be included for Auto Scanning is made with the Scan/Skip Mode setting under the F3 SET function (see page 26).
- The amount of time that each Port displays for is set with the Scan Duration setting under the F3 SET function (see page 26). When you want to stop at a particular location, press the [Spacebar] to stop scanning and exit Auto Scan Mode.
- If the scanning stops on an empty port, or one where the computer is attached but is powered Off, the monitor screen will be blank, and the mouse and keyboard will have no effect. Simply wait - after the Scan Duration time is up, the Scan function will move on to the next port.
- As each computer is accessed, an S appears in front of the Port ID display to indicate that it is being accessed under Auto Scan Mode.
- While Auto Scan Mode is in effect, the console will not function normally. You must exit Auto Scan Mode in order to regain control of the console.
- While you are in Auto Scan Mode, you can pause the scanning in order to keep the focus on a particular computer by pressing P. See Invoking Auto Scan, page 37, for details.
- To exit Auto Scan Mode, press [Spacebar] or [Esc].
F8 LOUT

Pressing [F8] logs you out of OSD control of the computers, and blanks the Console screen. This is different from simply pressing [Esc] when you are at the Main Screen to deactivate the OSD. With this function you must log in all over again to regain access to the OSD, whereas with [Esc], all you have to do to reenter the OSD is tap the OSD Hotkey.

Note: 1. When you reenter the OSD after logging out, the screen stays blank except for the OSD Main Screen. You must input your password before you can continue.

2. If you reenter the OSD after logging out, and immediately use [Esc] to deactivate the OSD without having selected a port from the OSD menu, a Null Port message displays on the screen. The OSD Hotkey will bring up the Main OSD Screen.
Keyboard Port Operation

Overview
In addition to the OSD, the KH1508i / KH1516i also supports port control directly from the keyboard with the use of hotkey combinations.

Hotkey port control allows you to provide KVM focus to a particular computer directly from the keyboard. The KH1508i / KH1516i provides the following Hotkey Port Control features:
- Selecting the Active Port
- Auto Scanning
- Skip Mode Switching
- Beeping to indicate a port switch

Invoking Hotkey Mode
All Hotkey operations begin by invoking Hotkey Mode. Invoking Hotkey Mode takes three steps:
1. Hold down the Num Lock key;
2. Press and release the minus key;
3. Release the Num Lock key:
   [Num Lock] + [-];

Note: The minus key must be released within one half second, otherwise Hotkey invocation is cancelled and it has no effect.

(Continues on next page.)
When Hotkey Mode is active:

- The Caps Lock, and Scroll Lock LEDs flash in succession to indicate Hotkey Mode is active. They stop flashing and revert to normal status when you exit Hotkey Mode.
- A Command Line appears on the monitor screen. The command line prompt is the word *Hotkey:* in yellow text on a blue background, and displays the subsequent Hotkey information that you key in.
- Ordinary keyboard and mouse functions are suspended - only Hotkey compliant keystrokes (described in the sections that follow), can be input.
- Pressing [Esc] exits Hotkey Mode.

Selecting the Active Port

Each Computer Port is assigned a Port ID (see *Port ID Numbering*, page 19). You can directly access any computer on the installation with a Hotkey combination that specifies the Port ID of the Computer Port that the computer is connected to. The steps involved are:

1. Invoke Hotkey Mode (see page 34).
2. Key in the Port ID
   
   The Port ID numbers display on the Command Line as you key them in. If you make a mistake, use [Backspace] to erase the wrong number.

   **Note:**
   1. Just key in the numbers; do not key in the dash.
   2. If the port you want to switch to is on the current station, you can just key in the port number – you do not need to key in the station number.

3. Press [Enter]

   After you press [Enter], the KVM focus switches to the designated computer and you automatically exit Hotkey Mode.
Auto Scanning

Auto Scan automatically switches among all the active Computer Ports that are accessible to the currently logged on User at regular intervals, so that he can monitor their activity automatically. (See SCAN/SKIP MODE of the OSD F3 SET function, page 26 for information regarding accessible ports).

Setting the Scan Interval

The amount of time Auto Scan dwells on each port is set with the SCAN DURATION setting of the OSD F3 SET function (see page 26). You can change the scan interval before activating Hotkey Auto Scanning, if you wish, with the following Hotkey combination:

1. Invoke Hotkey Mode (see page 34).
2. Key in [T] [n]
   Where [T] is the letter T, and [n] is a number from 1-255 that represents the number of seconds for the dwell time.
   The letter T and the numbers display on the Command Line as you key them in. If you make a mistake, use [Backspace] to erase the wrong number.
3. Press [Enter]
   After you press [Enter], you automatically exit Hotkey Mode, and are ready to invoke Auto Scanning.
Chapter 4. Local Console Operation

Invoking Auto Scan

To start Auto Scanning, key in the following Hotkey combination:

1. Invoke Hotkey Mode (see page 34).

2. Press [A].

   After you press A, you automatically exit Hotkey Mode, and enter Auto Scan Mode, and Auto Scanning begins.

   - While you are in Auto Scan Mode, you can pause the scanning in order to keep the focus on a particular computer by pressing P or clicking with the mouse. During the time that Auto Scanning is paused, the Command Line displays: **Auto Scan: Paused.**

     **Pausing** when you want to keep the focus on a particular computer is more convenient than Exiting Auto Scan Mode because when you Resume scanning, you start from where you left off. If, on the other hand, you Exited and restarted, Scanning would start over from the very first computer on the installation.

     To resume Auto Scanning, press any key or click with the mouse. Scanning continues from where it left off.

   - While Auto Scan Mode is in effect, ordinary keyboard and mouse functions are suspended - only Auto Scan Mode compliant keystrokes can be input. You must exit Auto Scan Mode in order to regain normal control of the console.

3. To exit Auto Scan Mode press [Esc] or [Spacebar]. Auto Scanning stops when you exit Auto Scan Mode.
Skip Mode

This feature allows you to switch between computers in order to monitor them manually. You can dwell on a particular port for as long or as little as you like - as opposed to Auto Scanning, which automatically switches after a fixed interval. To invoke Skip Mode, key in the following Hotkey combination:

1. Invoke Hotkey Mode (see page 34).

2. Key in [Arrow]

   ∗ Where [Arrow] refers to one of the Arrow keys. After you press [Arrow], you automatically exit Hotkey Mode, and enter Skip Mode where you can switch ports as follows:

   - Skips from the current port to the first accessible port previous to it. (See SCAN/SKIP MODE, page 27, for information regarding accessible ports.)
   - Skips from the current port to the next accessible port.
   - Skips from the current port to the last accessible port of the previous Station.
   - Skips from the current port to the first accessible port of the next Station.

   ∗ Once you are in Skip Mode, you can keep on skipping by pressing the Arrow keys. You don't have to use the [NumLock] + [-] combination again.

   ∗ While Skip Mode is in effect, ordinary keyboard and mouse functions are suspended - only Skip Mode compliant keystrokes can be input. You must exit Skip Mode in order to regain normal control of the console.

3. To exit Skip Mode, press [Esc] or [Spacebar].
Hotkey Beeper Control

The Beeper (see ACTIVATE BEEPER, page 28) can be Hotkey toggled On and Off. When the beeper is set to On, the KH1508i / KH1516i beeps when it switches ports. To toggle the Beeper, key in the following Hotkey combination:

1. Invoke Hotkey Mode (see page 34).
2. Press [B]

After you press B, the Beeper toggles On or Off. The Command Line displays Beeper On or Beeper Off for one second; then the message disappears and you automatically exit Hotkey Mode.

Hotkey Summary Table

The following table summarizes Hotkey operations on the KH1508i / KH1516i:

<table>
<thead>
<tr>
<th>Hotkey Combination</th>
<th>Operation Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Num Lock] + [-]</td>
<td>Switches access to the computer that corresponds to that Port ID.</td>
</tr>
<tr>
<td>[T] [n] [Enter]</td>
<td>Sets the Auto Scan interval to n seconds - where n is a number from 0–255.</td>
</tr>
<tr>
<td>[A]</td>
<td>Invokes Auto Scan Mode. When Auto Scan Mode is in effect, [P] pauses Auto Scanning. When Auto Scanning is paused, pressing any key resumes Auto Scanning.</td>
</tr>
<tr>
<td>[←]</td>
<td>Invokes Skip Mode and skips from the current port to the first accessible port previous to it.</td>
</tr>
<tr>
<td>[→]</td>
<td>Invokes Skip Mode and skips from the current port to the next accessible port.</td>
</tr>
<tr>
<td>[↑]</td>
<td>Invokes Skip Mode and skips from the current port to the last accessible port of the previous Station.</td>
</tr>
<tr>
<td>[↓]</td>
<td>Invokes Skip Mode and skips from the current port to the first accessible port of the next Station.</td>
</tr>
<tr>
<td>[B]</td>
<td>Toggles the Beeper On or Off.</td>
</tr>
</tbody>
</table>
Firmware Upgrade

KH1508i / KH1516i Upgrade

New firmware upgrade packages are posted on our website as they become available. Check the website regularly to find the latest packages and information relating to them. This chapter explains how to upgrade the KH1508i / KH1516i’s firmware locally – as opposed to the browser upgrade described on page 56.

Note: Each time you do a local firmware upgrade, you must also do a browser firmware upgrade. If you upgrade one, you must also upgrade the other.

Before You Begin

To prepare for the firmware upgrade, do the following:

1. From a computer that is not part of your KVM installation go to our website and choose the model name that relates to your device to get a list of available Firmware Upgrade Packages.

2. Choose the Firmware Upgrade Package you want to install (usually the most recent), and download it to your computer.

3. Use the Firmware Upgrade Cable (provided with this unit), to connect a COM port on your computer to the Firmware Upgrade Port of the KH1508i / KH1516i.

Note: On a daisy chained installation, the chained stations will automatically receive the upgrade via the daisy chain cables.

4. Shut down all of the computers - but not the Stations - on your KVM installation.
5. From your KVM switch console, bring up the OSD (see page 21) and select the **F4ADM** function.

6. Scroll down to **FIRMWARE UPGRADE**. Press **[Enter]**, then press **[Y]** to invoke Firmware Upgrade Mode (see page 30) For your reference, the current firmware upgrade version displays on the screen.

**Starting the Upgrade**

To upgrade your firmware:

1. Run the downloaded Firmware Upgrade Package file - either by double clicking the file icon, or by opening a command line and keying in the full path to it.

   The Firmware Upgrade Utility *Welcome* screen appears:

   ![Firmware Upgrade Utility Welcome Screen](image)

   2. Read and *Agree* to the License Agreement (enable the I Agree radio button).

   *(Continues on next page.)*
3. Click **Next** to continue. The Firmware Upgrade Utility main screen appears:

![Firmware Upgrade Utility Main Screen](image)

The Utility inspects your installation. All the devices capable of being upgraded by the package are listed in the **Device List** panel.
4. After you have made your selection(s), Click **Next** to perform the upgrade.

- If you enabled *Check Firmware Version*, the Utility compares the device's firmware level with that of the upgrade files. If it finds that the device's version is higher than the upgrade version, it brings up a dialog box informing you of the situation and gives you the option to Continue or Cancel:

![Dialog box](image)

If you didn't enable *Check Firmware Version*, the Utility installs the upgrade files without checking whether they are a higher level, or not.

- As the Upgrade proceeds status messages appear in the Status Messages panel, and the progress toward completion is shown on the Progress bar.

- To abort the upgrade procedure before it completes, click **Cancel**. If you cancel before completion, a dialog box appears warning you that quitting at this point may cause the device’s firmware to be lost, and you are given the option to proceed or abort the cancel operation.

To recover from a “lost firmware” situation, see *Firmware Upgrade Recovery*, page 45.
Upgrade Succeeded:
After the upgrade has completed, a screen appears to inform you that the procedure was successful:

Click Finish to close the Firmware Upgrade Utility.

Upgrade Failed:
If the upgrade failed to complete successfully a dialog box appears asking if you want to retry. Click Yes to retry. If you Click No, the Upgrade Failed screen appears:

Click Cancel to close the Firmware Upgrade Utility. See the next section, Firmware Upgrade Recovery, for how to proceed.
Chapter 4. Local Console Operation

Firmware Upgrade Recovery
There are basically four conditions that call for firmware upgrade recovery:

1. When a firmware upgrade procedure is interrupted due to a power failure or loss of network connection.

2. When the unit’s firmware becomes corrupted for some reason and you are unable to operate it.

3. When you invoke Firmware Upgrade Mode (see FIRMWARE UPGRADE, page 30), but decide not to proceed with the upgrade.

4. When a firmware upgrade procedure fails.

To perform a firmware upgrade recovery, do the following:

1. Slide the Firmware Upgrade Recovery Switch (see page 7) to the Recover position.

2. Power off and restart the switch according to the instructions given in the Powering Off and Restarting section (see page 19).

3. Repeat the upgrade procedure starting with Starting the Upgrade, page 41.

4. When the upgrade ends, power off the switch

5. Slide the Firmware Upgrade Recovery Switch back to the Normal position.

6. Restart the switch according to the instructions given in the Powering Off and Restarting section (see page 19).

Note: 1. In condition 1, mentioned above, the IP module may fail and require a special procedure to recover. In that case, see IP Module Firmware Upgrade Recovery, page 155, for how to proceed.

2. If one of the daisy chained units fails to upgrade, unchain it from the installation and perform the recovery and upgrade operation on it independently. After it has been successfully upgraded, plug it back into the chain.
Adapter Cable Upgrade

The firmware for the KA9520, KA9570, and KA9130 KVM Adapter Cables can also be upgraded. Check the web site regularly to find the latest packages and information relating to them:

Before You Begin

To prepare for the firmware upgrade, do the following:

1. From a computer that is not part of your KVM installation go to our Internet support site and choose the model name that relates to your device to get a list of available Firmware Upgrade Packages.

2. Choose the Firmware Upgrade Package you want to install (usually the most recent), and download it to your computer.

   Note: The upgrade files for the three adapter cables aren’t packaged separately. A single upgrade package provides the upgrade files for all of them.

3. Use the Firmware Upgrade Cable (provided with this unit), to connect a COM port on your computer to the Firmware Upgrade Port of the KH1508i / KH1516i.

4. Shut down all of the computers - but not the Stations - on your KVM installation.

5. From your KVM switch console, bring up the OSD (see page 21) and select the F4ADM function.

6. Scroll down to ADAPTER UPGRADE. Press [Enter].

7. In the screen that comes up, press [Y] to invoke Upgrade Mode.

   Note: 1. A message appears reminding you to connect an adapter cable. The upgrade takes place via the Cat 5 cable that connects the adapter cable to the KVM switch, however, so there is no need to connect a separate firmware upgrade cable. If all the adapter cables you want to upgrade have already been connected to the switch, simply ignore the message.

   2. All the connected adapter cables get upgraded during a single upgrade session.
Starting the Upgrade:
To upgrade your firmware:

1. Run the downloaded Firmware Upgrade Package file - either by double clicking the file icon, or by opening a command line and keying in the full path to it.

   The Firmware Upgrade Utility *Welcome* screen appears (see page 41).

2. Read and *Agree* to the License Agreement (enable the I Agree radio button), then Click **Next** to continue. The Firmware Upgrade Utility main screen appears:

   ![Firmware Upgrade Utility](image)

   The Utility inspects your installation. All the devices capable of being upgraded by the package are listed in the *Device List* panel.

3. After all the devices have been listed, click **Next** to perform the upgrade.

   If you enabled *Check Firmware Version*, the Utility compares the device's firmware level with that of the upgrade files. If it finds that the device's version is higher than the upgrade version, it brings up a dialog box informing you of the situation and gives you the option to Continue or Cancel.

   If you didn't enable *Check Firmware Version*, the Utility installs the upgrade files without checking whether they are a higher level, or not.

   As the Upgrade proceeds status messages appear in the Status Messages panel, and the progress toward completion is shown on the *Progress* bar.
Upgrade Succeeded:
After the upgrade has completed, a screen appears to inform you that the procedure was successful:

Click **Finish** to close the Firmware Upgrade Utility.

**Note:** At the completion of the upgrade the KH1508i / KH1516i restarts.
Chapter 4. Local Console Operation

Adapter Cable Firmware Upgrade Recovery
There are basically four conditions that call for firmware upgrade recovery:

- When the unit’s firmware becomes corrupted for some reason and you are unable to operate it.
- When you invoke Adapter Upgrade Mode (see ADAPTER UPGRADE, page 30), but decide not to proceed with the upgrade.
- When a firmware upgrade procedure is interrupted.
- When a firmware upgrade procedure fails.

To perform a firmware upgrade recovery, do the following:

1. Unplug the Adapter Cable from the computer it is connected to.
2. Slide its Firmware Upgrade Recovery Switch (located next to the Cat 5 connector) to the Recover position.
3. Plug the adapter cable back into the computer.
4. From your KVM switch console, bring up the OSD (see page 21) and select the F4ADM function.
5. Scroll down to ADAPTER UPGRADE. Press [Enter].
7. Repeat the upgrade procedure starting with Starting the Upgrade:, page 47.
8. After the upgrade completes and the switch restarts, unplug the Adapter Cable from the computer and slide the Firmware Upgrade Recovery Switch back to the Normal position.
9. Plug the adapter cable back into the computer.

This completes the recovery procedure.
Chapter 5
Browser Login

Overview

An On Screen Display (OSD) interface governs remote KH1508i / KH1516i administration as well as user configuration and port switching operations. The OSD can be accessed either with a Windows-based client or a Java-based client. In order to perform remote operations, you must first log in via an Internet browser to connect to the KH1508i / KH1516i.

Logging In

To log in from an Internet browser:

1. Open the browser and specify the IP address of the KH1508i / KH1516i in the URL bar.

   **Note:** If you don't know the IP address, get it from the KH1508i / KH1516i administrator.

2. When the Security Alert dialog box appears, accept the certificate – it can be trusted. (See Trusted Certificates, page 150, for details.)

3. A login page appears:

![Login Page](image)

(Continues on next page.)
4. Provide a valid Username and Password (set up by the KH1508i / KH1516i administrator – see User Management, page 65), then Click Login to continue.

**Note:**
1. If you supply an invalid login, the authentication routine will return a message stating, *Invalid Username or Password. Please try again.* If you exceed the number of login failures set by the administrator, a message stating that *The page cannot be displayed*, appears. This is done to confuse and discourage hackers from trying to discover a valid Username and Password. If you see this message, try logging in again being careful with the Username and Password.

2. If you are the Administrator and are logging in for the first time, use the default Username: *administrator*; and the default Password: *password*. For security purposes, we strongly recommend you remove these and give yourself a unique Username and Password (see User Management, page 65).

After you have successfully logged in, the KH1508i / KH1516i Main Web page appears with the General dialog box displayed:

![General dialog box](image)

**Note:** This is the same dialog box that appears whenever you click the *General* icon at the top left of the page.
### Web Page Layout

#### The General Dialog Box

An explanation of the dialog box fields is given in the table below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Name</td>
<td>To make it easier to manage installations that have more than one KH1508i / KH1516i, each one can be given a name. The name that was assigned by the administrator to this unit displays here.</td>
</tr>
<tr>
<td>MAC Address</td>
<td>The KH1508i / KH1516i's MAC Address displays here.</td>
</tr>
<tr>
<td>Firmware Version</td>
<td>Indicates the KH1508i / KH1516i's current firmware version level. New versions of the KH1508i / KH1516i's firmware can be downloaded from our website as they become available. See Upgrading the Firmware (Browser Method), page 56, for details.</td>
</tr>
<tr>
<td>Network Transfer Rate</td>
<td>Displays the currently selected rate for data transmission. The network transfer rate is administrator selectable – see Network Transfer Rate, page 71.</td>
</tr>
<tr>
<td>Reset on exit</td>
<td>To save any configuration/administration changes that you have made in the KH1508i / KH1516i's OSD, place a check here to have the KH1508i / KH1516i implement the changes you have made and reset itself when you log out. Note: This checkbox is only enabled for users who have administration privileges.</td>
</tr>
<tr>
<td>Last IP from DHCP server</td>
<td>Displays the current IP address of the KH1508i / KH1516i.</td>
</tr>
</tbody>
</table>
Web Page Icons

The purpose of the other icons at the top of the web page are explained in the table below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
</table>
| ![Sync Icon](image) | **Sync**: Click this icon to synchronize the KH1508i / KH1516i's time with your computer's time.  
  - If both are in the same time zone, the device's time is changed to match the computer's time.  
  - If they are in different time zones, the device's time is changed to match the computer's time, except that the time zone difference is still maintained. |
| ![Firmware Icon](image) | **Firmware**: Click this icon to install new versions of the KH1508i / KH1516i's firmware. See Upgrading the Firmware (Browser Method), page 56, for details.  
  **Note**: The Firmware icon only displays for users with administrative permission. It doesn't appear on the web pages of users who don't have the proper permission. |
| ![Logout Icon](image) | **Logout**: You should always click this icon to log out and end your KH1508i / KH1516i session. If you close the browser without first logging out, you will have to wait approximately one minute before logging in again. |
## Web Page Buttons

The purpose of the buttons at the left of the web page are explained in the table below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| ![Windows Client](image) | Click this button to download the Windows Client software to remotely control the KH1508i / KH1516i and the devices connected to it.  
**Note:** This Windows Client isn't permanent. It becomes unusable once you exit the webpage. You must download a new Windows Client each time you log in from your browser. |
| ![Java Client](image) | For platform independence, the Java client allows users that have Java installed to connect to the KH1508i / KH1516i. Click this button to download the Java Client software to remotely control the KH1508i / KH1516i and the devices connected to it.  
**Note:** This Java Client isn't permanent. It becomes unusable once you exit the webpage. You must download a new Java Client each time you log in from your browser. |
| ![Windows Client](image) | In some instances, administrators don't want the KH1508i / KH1516i to be accessible by browser. Clicking this button allows the user to download the API version of the Windows Client. Once a user has downloaded the API program, the administrator can turn off browser access. API operation is discussed in Chapter 11. |
| ![Java Client](image) | In some instances, administrators don't want the KH1508i / KH1516i to be accessible by browser. Clicking this button allows the user to download the API version of the Java Client. Once a user has downloaded the API program, the administrator can turn off browser access. API operation is discussed in Chapter 11. |
| ![Log Server](image) | Clicking this button allows the administrator to download and install the Log Server application. See Chapter 10 for Log Server details. |
| ![PON](image) | If a Power on the NET™ (PON) module is connected to the KH1508i / KH1516i, clicking this button brings up it's interface. |
| ![Log](image) | All the events that take place on the KH1508i / KH1516i are recorded in a log file. Clicking this icon displays the contents of the log file. |
Upgrading the Firmware (Browser Method)

As new versions of the KH1508i / KH1516i firmware become available, they can be downloaded from our website. Check the web site regularly to find the latest information and packages.

Note: Each time you do a browser firmware upgrade, you must also do a local firmware upgrade (see Firmware Upgrade, page 40). If you upgrade one, you must also upgrade the other.

There are two methods to upgrade the firmware: over the net with a browser; and from a locally connected computer. This section describes the browser method. For the local method, see Firmware Upgrade, page 40.

Note: Upgrading the firmware is an administration function and requires administrator privileges.

To upgrade the firmware, do the following:

1. Download the new firmware file to a computer that is not part of your KH1508i / KH1516i installation.

2. From that computer, open your browser and log in to the KH1508i / KH1516i.

3. Click the Firmware icon (see page 54) to open the Firmware configuration dialog box:

   ![Firmware Configuration Dialog Box]

4. Click Browse; navigate to the directory that the new firmware file is in and select the file.

5. Click Upload.

6. After the upload completes, click the Logout icon at the top right of the web page to exit and reset the KH1508i / KH1516i.
Activating the OSD

Windows Client

After you have successfully logged in (see Logging In, page 51), to activate the browser-based Windows Client OSD do the following:

1. Click the Windows Client button (the one without the arrow) at the left of the web page.

   **Note:**
   1. You must have DirectX 7.0 or higher installed on your computer. If not, the Windows Client will not load. If you don't already have it, DirectX is available for free download from Microsoft's website: http://www.microsoft.com/downloads.
   2. The Windows Client button with the arrow is for running the AP version of the Windows Client (see Chapter 11, AP Operation, for details).

2. When the file download security warning dialog box appears, click **Run**.

3. If a second security warning dialog box appears, click **Run** again.

   **Note:**
   1. If the browser cannot run the file, save it to disk, instead. Then, with your browser still open to the KH1508i / KH1516i web page, run the file from your disk.
   2. If you use the save to disk method, for security purposes, you cannot simply run a previously downloaded version of the program. Each time you want to access the KH1508i / KH1516i, you must log in to the web page with a valid username and password to download a fresh copy of the program.

(Continues on next page.)
4. When a connection to the KH1508i / KH1516i has been established a screen similar to the one below appears:

- If Full Screen Mode is enabled (the box is checked), after you connect the remote display displays full screen on your local monitor.
- If Full Screen Mode is not enabled (the box is not checked), after you connect the remote display appears as a window on your desktop. If the remote screen is larger than what is able to fit in the window, move the mouse pointer to the screen border that is closest to the area you want to view and the screen will scroll.
- If Keep Screen Size is enabled (the box is checked), after you connect the remote display is not resized – it runs on your local monitor with its original resolution
  - If the remote resolution is smaller, its display appears in a window centered on your screen.
  - If the remote resolution is larger, its display is centered on your screen. To access the areas that are off screen, move the mouse to the corner of the screen that is closest to the area you want to view and the screen will scroll.
- If Keep Screen Size is not enabled (the box is not checked), after you connect the remote screen is resized to match your local monitor's resolution.

5. Click **Switch** to bring up the OSD. After you switch to the KH1508i / KH1516i, the OSD comes up with the **Main page** and **Windows Client Control Panel** displayed:
Chapter 5. Browser Login

The OSD consists of three pages – Main, Configuration, and Administration. The Administration and Configuration pages are discussed in Chapter 6. The Main page is discussed in the Windows Client Port Operation chapter, on page 93.

Note:

1. The Administration tab is disabled for users who don’t have administration permission.

2. There is a small Windows Client Control Panel at the lower right. The control panel is discussed in detail on page 84.
Java Client

After you have successfully logged in (see page 51), to activate the Java Client OSD do the following:

1. Click the Java Client button (the one without the arrow) at the left of the web page.

   **Note:** You must have Sun's Java 2 JRE 1.4.2 or higher installed on your computer before running the Java Client. (At the time of writing, JRE 5.0 Update 5 was the latest release.) Java is available for free download from the Sun Java website: http://java.sun.com.

2. Accept the security certificates.

3. When the browser dialog asks what to do with the program file, click Open.

   **Note:**
   1. If the browser cannot run the file, save it to disk, instead. Then, with your browser still open to the KH1508i / KH1516i web page, run the file from your disk.
   2. If you use the save to disk method, for security purposes, you cannot simply run a previously downloaded version of the program. Each time you want to access the KH1508i / KH1516i, you must log in to the web page with a valid username and password to download a fresh copy of the program.

After a second or two, an Authentication progress window appears:
Once the authentication procedure completes successfully, the OSD Main Screen comes up in the center of your monitor. This is the same OSD that appears when the Windows Client is invoked.

As with the Windows Client, the OSD consists of three pages – Main, Configuration, and Administration. The Administration and Configuration pages are discussed in Chapter 6. The Main page is discussed in the *Windows Client Port Operation* chapter, on page 93.

**Note:**
1. The *Administration* tab is disabled for users who don't have administration permission.
2. Instead of a control panel like the one that the Windows Client uses, the Java Client has a hidden control panel, located at the bottom center of the screen. The panel becomes visible when the mouse pointer is moved over it. The functions of the Control Panel icons are described in the *Java Client Port Operation* chapter, on page 108.
Chapter 6
Administration and Configuration

Overview

The remote OSD's Administration page lets the Administrator (and users with administration permission - see User Management, page 65) configure and control overall KH1508i / KH1516i operations. The tab that activates the page is disabled (grayed out) for users who do not have administration permission.

The OSD Configuration page allows users to set up their own, individual, working environments. The KH1508i / KH1516i stores a separate configuration record for each user profile, and sets up the working configuration according to the Username that is used to log in.

The Administration Page

Each of the administrative functions is represented by an icon at the left of the page. Clicking the icon brings up its associated dialog box. When the Administration page first comes up the General dialog box appears:

(Continues on next page.)
The General Page presents four items of information. This is the same information that displays after you log in from a browser, or when you click the General icon at the top left of the browser main page. The meaning of these items is described in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Name</td>
<td>This field lets you give the switch a unique name. This can be convenient when you need to differentiate among several devices in multi station installations.</td>
</tr>
<tr>
<td>MAC Address</td>
<td>This item displays the KH1508i / KH1516i's MAC address.</td>
</tr>
<tr>
<td>Firmware Ver</td>
<td>This item displays the current firmware version number. You can reference it to see if there are newer versions available on the Altusen website.</td>
</tr>
<tr>
<td>Last IP from DHCP Server</td>
<td>If the switch is on a network that uses DHCP assigned IP addresses, this item is a convenient way of ascertaining what its IP address is, to inform the Users which IP to use when they want to log in to the KH1508i / KH1516i.</td>
</tr>
</tbody>
</table>

**Note:** If the switch has a fixed IP address, this item doesn't appear.
User Management

The User Management dialogs are used to create and manage user profiles. Up to 64 user profiles can be established. Up to 32 users can log in concurrently.

- To delete a user profile, select it in the list box, and click **Remove**.
- To modify a user profile, select it and click **Edit**.
- To add a user, click **New**.

If you choose **Edit** or **New**, a dialog box similar to the one below appears:
Fill in the required information for a new profile, or modify the existing information to edit a previous profile. A description of the field headings is given in the table below:

<table>
<thead>
<tr>
<th>Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>A minimum of 6 and a maximum of 16 characters is allowed.</td>
</tr>
<tr>
<td>Password</td>
<td>A minimum of 8 and a maximum of 16 characters is allowed.</td>
</tr>
<tr>
<td>Confirm Password</td>
<td>To be sure there is no mistake in the password, you are asked to enter it again. The two entries must match.</td>
</tr>
<tr>
<td>Description</td>
<td>Additional information about the user that you may wish to include.</td>
</tr>
<tr>
<td>Admin</td>
<td>Enabling this gives the user Administrator level access to the KH1508i / KH1516i. All permissions are granted. (See Permissions, in this table.)</td>
</tr>
<tr>
<td>User</td>
<td>Enabling this gives the user User level access to the KH1508i / KH1516i. Windows Client, Power Manager, and Java Client permissions are granted. (See Permissions, in this table.)</td>
</tr>
<tr>
<td>Select</td>
<td>This button is automatically enabled if the permission choices selected by the Administrator (in the panel just below) do not match the default access level choices for Admin or User.</td>
</tr>
<tr>
<td>Permissions</td>
<td>These are used together with the Select radio button to set up permissions that differ from the defaults for Admin and User.</td>
</tr>
<tr>
<td></td>
<td>1. Checking Administration gives a User administration privileges, which allows him to set up and modify the KH1508i / KH1516i’s Administration page settings.</td>
</tr>
<tr>
<td></td>
<td>2. Checking Windows Client allows a user to access the KH1508i / KH1516i via the Windows Client software. By default, all users may access the KH1508i / KH1516i via the Windows Client software.</td>
</tr>
<tr>
<td></td>
<td>3. Checking Log allows a User to view and query the log file. The Log and Log Server buttons appear on the Main web page of Users who have Log permission (see the screenshot on page 52).</td>
</tr>
<tr>
<td></td>
<td>4. Checking Power Manager allows a User to connect to Power on the Net™ devices. The PON button appears on the Main web page of Users who have Power Manager permission (see the screenshot on page 52).</td>
</tr>
<tr>
<td></td>
<td>5. Checking Java client allows a User to access the KH1508i / KH1516i via the Java Client software.</td>
</tr>
</tbody>
</table>

(Continues on next page.)
Port Access
Clicking the Port Access button brings up a dialog box that allows the Administrator or a User with Administration permission to define the selected User's access to the computers on a Port-by-Port basis:

- Click + to expand a Station and show a list of its ports
The access rights choices are explained in the table, below:

<table>
<thead>
<tr>
<th>Choice</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full</td>
<td>The user can view the remote screen and can perform operations on the remote system from his keyboard and monitor.</td>
</tr>
<tr>
<td>View Only</td>
<td>The user can only view the remote screen; he cannot perform any operations on it.</td>
</tr>
<tr>
<td>None</td>
<td>No access rights - the Port will not show up on the User's list on the Main Screen.</td>
</tr>
</tbody>
</table>

The default setting is *Full* for all users on all ports. The access rights can be changed in the following ways:

- Click directly over an access right to cycle through the choices
- Move the highlight bar to a port and press + to cycle forward through the choices
- Move the highlight bar to a port and press - to cycle backward through the choices
- [Shift] Click on any port to have all the ports on the Station cycle through the choices in unison
- Hold down [Shift] and tap + to have all the ports on the Station cycle forward through the choices in unison
- Hold down [Shift] and tap - to have all the ports on the Station cycle backward through the choices in unison
- When you have finished making your choices, click **Save**.
- If you want to abandon your choices and exit without saving, click **Cancel**.
Chapter 6. Administration and Configuration

Service Configuration

The Service Configuration dialog is composed of two main panels: Access Port and Log Server:

Access Port

As a security measure, if a firewall is being used, the Administrator can specify the port numbers that the firewall will allow, and set the firewall accordingly. Users must specify the port number when they log in to the KH1508i / KH1516i. If an invalid port number (or no port number) is specified, the KH1508i / KH1516i will not be found.

An explanation of the fields is given in the table below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program</td>
<td>This is the port number that must be specified when connecting from the Windows Client software program. Valid entries are from 1024–65535. The default is 9000.</td>
</tr>
<tr>
<td>Java</td>
<td>This is the port number used for Java Client connections. Valid entries are from 1024–65535. The default is 9002.</td>
</tr>
<tr>
<td>HTTP</td>
<td>The port number for a browser login. The default is 80.</td>
</tr>
<tr>
<td>HTTPS</td>
<td>The port number for a secure browser login. The default is 443.</td>
</tr>
</tbody>
</table>

Note: 1. If there is no firewall (on an Intranet, for example), it doesn’t matter what these numbers are set to, since they have no effect.

2. The access ports cannot have the same value. You must set a different value for each one.
Log Server

Important transactions that occur on the KH1508i / KH1516i, such as logins and internal status messages, are kept in an automatically generated log file. Specify the MAC address and a port number for the computer that the Log Server resides on in this panel. The valid port range is 0-65535. The default port number is 9001.

Installation and operation of the Log Server is discussed in Chapter 10. The Log File is discussed on page 117.
Network

The Network dialog is used to specify the KH1508i / KH1516i's network environment.

**Network Transfer Rate**

Set the rate at which the KH1508i / KH1516i transfers data to remote computers. The range is from 8 to 99999 Kilobytes per second (KBps).

**IP Address**

The KH1508i / KH1516i can either have its IP address assigned dynamically (DHCP), or it can be given a fixed IP address.

- For dynamic IP address assignment, select the *Obtain an IP address automatically* radio button.
- To specify a fixed IP address, select the *Set IP address manually* radio button and fill in the IP address.

**DNS Server**

- For automatic DNS Server address assignment, select the *Obtain DNS Server address automatically* radio button.
- To specify the DNS Server address manually, select the *Use the following DNS Server address* radio button, and fill in the addresses for the Primary and Alternate DNS servers.

**Note:** Specifying at the primary DNS Server address is mandatory. The alternate DNS Server address is optional.
Radius

The RADIUS dialog box allows you to set up login authorization for the KH1508i / KH1516i through a RADIUS server:

To enable RADIUS authorization, do the following:

1. Check Enable Radius.
2. Fill in the IP addresses and Service Ports for the Primary and Alternate RADIUS servers.
3. Set the time in seconds that the KH1508i / KH1516i waits for a RADIUS server reply before it times out in the Timeout field.
4. Set the number of RADIUS retries allowed in the Retries field.
5. Key the Shared Secret character string that you want to use for authentication between the KH1508i / KH1516i and the RADIUS Server in this field.
6. Set the access rights for each user on the RADIUS server according to the information in the table on the next page.
### RADIUS Server Access Rights Table:

<table>
<thead>
<tr>
<th>Character</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Grants the user administrator privileges – allowing system configuration.</td>
</tr>
<tr>
<td>W</td>
<td>Allows the user to access the system via the Windows Client program.</td>
</tr>
<tr>
<td>J</td>
<td>Allows the user to access the system via the Java Client program.</td>
</tr>
<tr>
<td>P</td>
<td>Allows the user to access an attached Power Over the Net™ device.</td>
</tr>
<tr>
<td>L</td>
<td>Allows the user to access log information via the user’s browser.</td>
</tr>
<tr>
<td>PN</td>
<td>Restricts the user from accessing specified ports on the OSD port list. <strong>Syntax:</strong> PN/1/2/3/4 (etc.)</td>
</tr>
<tr>
<td>PV</td>
<td>Limits the User to only being able to view specified ports on the OSD port list. <strong>Syntax:</strong> PV/1/2/3/4 (etc.)</td>
</tr>
<tr>
<td>UHK</td>
<td>Defines the OSD Hotkey (see page 81). <strong>UHK0:</strong> Scroll Lock + Scroll Lock <strong>UHK1:</strong> Ctrl + Ctrl</td>
</tr>
<tr>
<td>UOL</td>
<td>Defines the OSD List Function (see The Main Page, and, Quick View Ports, page 93). <strong>UOL0:</strong> All <strong>UOL1:</strong> Powered On <strong>UOL2:</strong> Quick View <strong>UOL3:</strong> Quick View +Powered On</td>
</tr>
<tr>
<td>UODM</td>
<td>Selects how the Port ID displays (see page 81). <strong>UODM0:</strong> Port Number + Port Name <strong>UODM1:</strong> Port Number <strong>UODM2:</strong> Port Name</td>
</tr>
<tr>
<td>UODT</td>
<td>Determines the length of time in seconds that the Port ID displays on the monitor after a port change (see page 81). <strong>Syntax:</strong> UODTn (where n represents a number from 0-255) The default is 10 seconds.</td>
</tr>
<tr>
<td>UBUZ</td>
<td>Turns the beeper off or on (see page 81). <strong>UBUZ0:</strong> Beeper Off <strong>UBUZ1:</strong> Beeper On</td>
</tr>
<tr>
<td>ULT</td>
<td>Sets the Logout Timeout. When there is no input from the user for the amount of time set with this function, the user is automatically logged out and will need to log in again. The valid Logout Timeout range is from 0-180 minutes. <strong>Syntax:</strong> ULTn (where n represents a number from 0 to 180 minutes. The default is 30 minutes.</td>
</tr>
</tbody>
</table>

*(Continues on next page.)*
Note: 1. Characters are not case sensitive. Upper or lower case works equally well.

2. Characters are comma delimited.

3. An invalid character in the configuration string will prohibit access to the KH1508i / KH1516i for the user.

**RADIUS Server Access Rights Examples:**

<table>
<thead>
<tr>
<th>Character</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| USM       | Selects which computers the User can access under Auto Scan Mode (see Scan Select, page 81).  
        | USM0: All  
        | USM1: Powered On  
        | USM2: Quick View  
        | USM3: Quick View + Powered On |
| UST       | Determines the length of time in seconds the KVM focus dwells on each port in Auto Scan Mode (see Scan Duration, page 81).  
        | Syntax: USTn (where n represents a number from 0–255) |
| c,w,p     | User has administrator privileges; user can access the system via the Windows Client; user can manage the attached Power over the NET device. |
| w,j,l     | User can access the system via the Windows Client; user can access the system via the Java Client; user can access log information via the user’s browser. |
Chapter 6. Administration and Configuration

Security
The Security page controls access to the KH1508i / KH1516i.

IP and MAC Filtering
- If any filters have been configured, they appear in the IP Filter and/or MAC Filter list boxes.
- IP and MAC Filters control access to the KH1508i / KH1516i based on the IP and/or MAC addresses of the computers attempting to connect. A maximum of 100 IP filters and 100 MAC filters are allowed. To enable IP and/or MAC filtering, Click to put a check mark in the IP Filter Enable and/or MAC Filter Enable checkbox.
- If the include button is checked, all the addresses within the filter range are allowed access; all other addresses are denied access.
- If the exclude button is checked, all the addresses within the filter range are denied access; all other addresses are allowed access.
- To add a filter, click New. A dialog box similar to the ones below appears:
Note: Each IP filter can consist of a single address, or a range of addresses. To filter a single IP address, key in the same address in both the From and To fields. To filter a continuous range of IP addresses, key in the start of the range in the From field; key in the end of the range in the To field.

After you specify the filter addresses, click OK.

- To delete a filter, select it in the IP Filter and/or MAC Filter list boxes and click Remove.
- To modify a filter, select it in the IP Filter and/or MAC Filter list boxes and click Edit. The Edit dialog box is similar to the New dialog box. When it comes up, simply delete the old address and replace it with the new one.

Default Web Page Name

- The Default web page name entry field lets the Administrator specify a login string (in addition to the IP address) that the user must include when accessing the KH1508i / KH1516i with a browser. For example:

\[192.168.0.126/abcdefg\]

- The user must include the forward slash and the string along with the IP address. For security purposes, we recommend that you change this string from time to time.

Note: If no login string is specified here, anyone will be able to access the KH1508i / KH1516i login page using the IP address alone. This makes your installation less secure.
Customization

The Customization dialog box is arranged in four major sections, as described below:

Login Failures
- **Allowed**: sets the number of consecutive failed login attempts that are permitted from a remote computer.
- **Timeout**: sets the amount of time a remote computer must wait before attempting to login again after it has exceeded the number of allowed failures.

Working Mode
- If **Stealth Mode** is enabled, the KH1508i / KH1516i cannot be pinged.
- To permit browser access to the KH1508i / KH1516i, click to put a check mark in the **Enable Browser** checkbox. If browser access is not enabled, users will not be able to log into the unit via their browsers.
- If **Multiuser Operation** is enabled, up to 32 users can simultaneously access the KH1508i / KH1516i.
- If **Set default to grayscale** is enabled, the remote display is changed to grayscale. This can speed up I/O transfer in low bandwidth situations.
I/O Modules

Clicking the Attributes button in the I/O Modules section brings up a dialog box that allows you to set attribute parameters for each of the ports:

Note: KVM Adapter Cables are referred to as I/O Modules in these dialog boxes.

The port numbers are listed in the column on the left. The port’s attributes are shown to its right.

- The first column to the right of the port numbers specifies the operating system that the computer on the connected port is using. Choices are PC, Mac, Sun, and Other. The default is PC.
- The next column specifies the OS language that the computer on the connected port is using. Choices are US English, UK English, French, German, Korean, Japanese, Spanish, and Traditional Chinese. The default is US English.
- The third column specifies length of the Cat5 cable that is used to connect the computer to the port. Choices are Short (less than 25m), Medium (20–40m), and Long (greater than 35m). The default is Short.
- To change an attribute:
  - Click on it to cycle through the choices.
  - Navigate to it with the Arrow Keys and press + or - to cycle through the choices. Hold down [Shift] while you press + or - to have all the ports on the Station cycle through the attribute choices in unison.
Chapter 6. Administration and Configuration

**Miscellaneous**

The functions performed by the remaining elements at the bottom of the screen are described in the table, below:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reset on Exit</td>
<td>Place a check here to have the KH1508i / KH1516i reset itself and implement all the new settings when you log out. Following the reset, wait approximately 30 to 60 seconds before logging back in. <strong>Note:</strong> For some changes the <em>Reset on exit</em> check box is automatically selected and the KVM switch will reset when you log out. Clearing the check mark before logging out will cause the new settings to be discarded.</td>
</tr>
<tr>
<td>Reset Values</td>
<td>Clicking this button undoes all changes that have been made to the Configuration and Administration pages (except for the Port Names that were assigned to the Ports - see <em>Port Names</em>, page 96) and returns the parameters to the original factory default settings (see <em>OSD Factory Default Settings</em>, page 153).</td>
</tr>
<tr>
<td>Clear Name List</td>
<td>This function is similar to Reset Values. The difference is that it also clears the Port Name settings at the same time that it undoes all changes and returns the setup to the original factory default settings.</td>
</tr>
</tbody>
</table>
The Configuration Page

The OSD Configuration page allows users to set up their own, individual, working environments. The KH1508i / KH1516i stores a separate configuration record for each user profile, and sets up the working configuration according to the Username that is used to log in.

The Configuration page settings are explained in the table on the following page.

(Continues on next page.)
### Setting Function

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSD Hotkey</td>
<td>Selects which Hotkey controls the OSD function: [Scroll Lock] [Scroll Lock] or [Ctrl] [Ctrl]. Since the Ctrl key combination may conflict with programs running on the computers, the default is the Scroll Lock combination.</td>
</tr>
<tr>
<td>ID Display</td>
<td>Selects how the Port ID is displayed: the Port Number alone (PORT NUMBER); the Port Name alone (PORT NAME); or the Port Number plus the Port Name (PORT NUMBER + PORT NAME). The default is PORT NUMBER + PORT NAME.</td>
</tr>
<tr>
<td>ID Duration</td>
<td>Determines how long a Port ID displays on the monitor after a port change has taken place. You can choose an amount from 0 - 255 seconds. The default is 5 Seconds. 0 is Always On.</td>
</tr>
<tr>
<td>Scan Select</td>
<td>Selects which computers will be accessed under Auto Scan Mode (see Auto Scanning, page 103). Choices are: ALL - All the Ports which have been set Accessible (see Port Access, page 67); POWERED ON - Only those Ports which have been set Accessible and are Powered On; QUICK VIEW - Only those Ports which have been set Accessible and have been selected as Quick View Ports (see SET QUICK VIEW PORTS, page 28, and Quick View Ports, page 93); QUICK VIEW + POWERED ON - Only those Ports which have been set Accessible and have been selected as Quick View Ports and are Powered On. The default is ALL.</td>
</tr>
<tr>
<td>Scan Duration</td>
<td>Determines how long the focus dwells on each port as it cycles through the selected ports in Auto Scan Mode (see Auto Scanning, page 103). Key in a value from 0 - 255 seconds. The default is 10 seconds; a setting of 0 disables the Scan function.</td>
</tr>
<tr>
<td>Screen Blanker</td>
<td>If there is no input from the console for the amount of time set with this function, the screen is blanked. Key in a value from 0–30 minutes. A setting of 0 disables this function. The default is 0 (disabled).</td>
</tr>
<tr>
<td>Logout Timeout</td>
<td>If there is no Operator input for the amount of time set with this function, the Operator is automatically logged out. A login is necessary before the KH1508ii / KH1516ii can be accessed again. Enter a value from 0–180 minutes. The default is 30 minutes. 0 disables the function.</td>
</tr>
<tr>
<td>Beeper</td>
<td>When set to ON, the beeper sounds whenever the port is switched, when activating the Auto Scan function (see Auto Scanning, page 103), or when an invalid entry is made on an OSD menu. The default is ON.</td>
</tr>
<tr>
<td>Change Password</td>
<td>Allows a user to change the account password. After clicking the Change Password button, a dialog box appears. Enter the old password. Then, enter a new password and confirm it by entering it again. Press OK to save changes, or press Cancel to discard changes.</td>
</tr>
</tbody>
</table>
Chapter 7
Windows Client Port Operation

After you switch to the KH1508i / KH1516i (see page 57), the OSD comes up with the Main page and Windows Client Control Panel displayed:

The OSD consists of three pages – Main, Configuration, and Administration. Administration and Configuration are discussed in Chapter 6. The Main page is discussed in this chapter, beginning on page 93.

**Note:** The Administration tab is disabled for users who don't have administration permission.
## Windows Client Control Panel

The control panel consists of an icon bar at the top, with two text bars below it. Initially, the text bars display the video resolution and IP address of the device at the remote location. As the mouse pointer moves over the icons in the icon bar, however, the text bar information changes to describe the icon's function. The functions that the icons perform are described in the table below.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>![hand icon]</td>
<td>Click and drag to move the control panel to another position on the screen.</td>
</tr>
<tr>
<td>![calendar icon]</td>
<td>Click to bring up the Hotkey Setup dialog box (see Hotkey Setup, page 85 for details).</td>
</tr>
<tr>
<td>![spade icon]</td>
<td>Click to bring up the Video Options dialog box. Right-click to perform a quick Auto Sync (see Video Adjustment, page 87).</td>
</tr>
<tr>
<td>![lightning bolt icon]</td>
<td>Click to bring up the Message Board (see page 90).</td>
</tr>
<tr>
<td>![CTRL+ALT+DEL icon]</td>
<td>Click to send a Ctrl+Alt+Del signal to the remote system.</td>
</tr>
<tr>
<td>![cogwheel icon]</td>
<td>Click to exit the remote view.</td>
</tr>
<tr>
<td>![spacebar icon]</td>
<td>Hover over the space to see the video resolution and IP address of the device at the remote location.</td>
</tr>
</tbody>
</table>

These Lock Key LEDs show the Num Lock, Caps Lock, and Scroll Lock status of the remote computer. Click on the icon to toggle the status.

**Note:** When you first connect, the LED display may not be accurate. To be sure, click on the LEDs to set them.
Chapter 7. Windows Client Port Operation

Hotkey Setup
Various actions related to manipulating the remote server can be accomplished with hotkeys. The Hotkey Setup utility (accessed by clicking the Keyboard icon on the Control Panel), lets you configure which hotkeys perform the actions. The actions are listed in the left panel; the hotkeys that invoke them are shown in the panel at the right.

If you find the default Hotkey combinations inconvenient, you can re-configure them as follows:
1. Highlight the Action, and then Click Start.
2. Key in the Function keys (one at a time). The key names appear in the Key field as you press them.
3. When you have finished keying in your sequence, Click Stop.
4. Click Set. Repeat for any other actions for which you wish to re-assign Hotkeys.
5. Click Close.

Note: You can use the same function keys for more than one action, as long as the first key is not the same. For example, you can use F1 F2 F3 for one action; F2 F1 F3 for another; F3 F2 F1 for a third, etc.

(Continues on next page.)
(Continued from previous page.)

An explanation of the Hotkey actions is given in the table below:

<table>
<thead>
<tr>
<th>Action</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exit remote location</td>
<td>Breaks the connection to the KH1508i / KH1516i and returns you to local operation.</td>
</tr>
<tr>
<td>Adjust Video</td>
<td>Brings up the video adjustment utility.</td>
</tr>
<tr>
<td>Toggle OSD</td>
<td>Toggles the OSD display Off and On.</td>
</tr>
<tr>
<td>Toggle mouse display</td>
<td>If you find the display of the two mouse pointers (local and remote) to be confusing or annoying, you can use this function to shrink the non-functioning pointer down to a barely-noticeable tiny circle - which can be ignored. Since this function is a toggle - use the hotkeys again to bring the mouse display back to its original configuration.</td>
</tr>
<tr>
<td>Adjust mouse</td>
<td>This utility synchronizes the local and remote mouse movements following a video resolution change. After invoking this utility, simply click the local mouse pointer on top of the remote mouse pointer.</td>
</tr>
<tr>
<td>Substitute Alt key</td>
<td>Although all other keyboard input is captured and sent to the KH1508i / KH1516i, [Alt + Tab] and [Ctrl + Alt + Del] work on your local computer. In order to implement their effects on the remote system, another key may be substituted for the Alt key. If you substitute the F12 key, for example, you would use [F12 + Tab] and [Ctrl + F12 + Del].</td>
</tr>
<tr>
<td>Substitute Ctrl key</td>
<td>If your local computer captures Ctrl key combinations, preventing them from being sent to the remote system, you can implement their effects on the remote system by specifying a function key to substitute for the Ctrl key. If you substitute the F11 key, for example, pressing [F11 + 5] would appear to the remote system as [Ctrl + 5].</td>
</tr>
</tbody>
</table>

**Note:** To invoke an action, you must press and release the keys one key at a time.
Chapter 7. Windows Client Port Operation

Video Adjustment

The Video options dialog box allows you to adjust the placement and picture quality of the remote screen (as displayed on your monitor). To bring up the dialog box, either click on the Hammer icon on the Control Panel, or use the Adjust Video hotkeys (see Hotkey Setup, page 85). The following screen appears:

The meanings of the adjustment options are given in the table below.

(Continues on next page.)
### Option | Usage
--- | ---
**Screen Position** | Adjust the horizontal and vertical position of the remote computer window by Clicking the Arrow buttons.
**Auto-Sync** | Click Auto-Sync to have the function detect the vertical and horizontal offset values of the remote screen and automatically synchronize it with the local screen. If the local and remote mouse pointers are out of sync, in most cases, performing this function will bring them back into sync. **Note:** This function works best with a bright screen. If you are not satisfied with the results, use the Screen Position arrows to position the remote display manually.
**RGB** | Drag the slider bars to adjust the RGB (Red, Green, Blue) values. When an RGB value is increased, the RGB component of the image is correspondingly increased.
**Gamma** | This section allows you to adjust the video display’s gamma level. This function is discussed in detail in the next section, *Gamma Adjustment.*
**Video Quality** | Drag the slider bar to adjust the overall Video Quality. Values can be from 20 to 100. The larger the value, the clearer the picture and the more video data goes through the network. Depending on the network bandwidth, a high value may adversely affect response time.
**Bandwidth Control** | This setting adjusts the ratio between picture quality and network speed. For slow data connections, drag the slider bar to a lower setting to decrease the amount of video data transferred. This ensures screen refresh at workable speeds.
Chapter 7. Windows Client Port Operation

Gamma Adjustment
If it is necessary to correct the gamma level for the remote video display, use the Gamma function of the Video Adjustment dialog box.

- Under Basic configuration, there are ten preset and four user-defined levels to choose from. Drop down the list box and choose the most suitable one.
- For greater control, clicking the Advanced button brings up the following dialog box:

![Gamma Adjustment Dialog Box]

- Click and drag the diagonal line at as many points as you wish to achieve the display output you desire.
- Click Save As to save up to four user-defined configurations derived from this method. Saved configurations can be recalled from the list box at a future time.
- Click Reset to abandon any changes and return the gamma line to its original diagonal position.
- Click OK to save your changes and close the dialog box.
- Click Cancel to abandon your changes and close the dialog box.

Note: For best results, change the gamma while viewing a remote computer.
The Message Board

The KH1508i / KH1516i supports multiple user logins, which can possibly give rise to access conflicts. To alleviate this problem, a message board feature has been provided, allowing users to communicate with each other.

The message board functions much like an Internet chat program does. When you click the Message Board icon on the Windows Client Control Panel (see page 84), a screen similar to the one below appears:
The Button Bar

The buttons on the Button Bar are toggles. Their actions are described in the table below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable/Disable Chat</td>
<td>Chat. When disabled, messages posted to the board are not displayed. The button is shadowed when Chat is disabled. The icon displays next to the user's name in the User List panel when the user has disabled Chat.</td>
</tr>
<tr>
<td>Occupy/Release KVM</td>
<td>Keyboard/Video/Mouse. When you Occupy the KVM, other users cannot see the video, and cannot input keyboard or mouse data. The button is shadowed when the KVM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KVM.</td>
</tr>
<tr>
<td>Occupy/Release KM</td>
<td>Keyboard/Mouse. When you Occupy the KM, other users can see the video, but cannot input keyboard or mouse data. The button is shadowed when the KM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KM.</td>
</tr>
<tr>
<td>Show/Hide User List</td>
<td>User List. When you Hide the User List, the User List panel closes. The button is shadowed when the User List is open.</td>
</tr>
</tbody>
</table>

Message Display Panel

Messages that users post to the board - as well as system messages - display in this panel. If you disable Chat, however, messages that get posted to the board won't appear.

Compose Panel

Key in the messages that you want to post to the board in this panel. Click Send, or press [Enter] to post the message to the board.
User List Panel
The names of all the logged in users are listed in this panel.

- Your name appears in blue; other users' names appear in black.
- By default, messages are posted to all users. To post a message to one individual user, select the user's name before sending your message.
- If a user's name is selected, and you want to post a message to all users, select All Users before sending your message.
- If a user has disabled Chat, its icon displays before the user's name to indicate so.
- If a user has occupied the KVM or the KM, its icon displays before the user's name to indicate so.
Chapter 7. Windows Client Port Operation

The Main Page

This page lists all of the KH1508i / KH1516i's ports and governs port access. Selecting a port and double clicking it switches you to the device on that port.

Note: The administrator selects which ports are accessible to each user with the User Management function (see page 65 for details).

• The OSD uses a tree view. To see the ports for a particular station, click the plus sign [+ ] in front of the Station Number. To dismiss the list, click the minus sign[ – ] in front of the Station Number.
• A port icon in the shape of a monitor displays in front of the port number. Ports that have devices connected to them that are up and running have the port icon lit in green.
• Ports that have been selected as Quick View ports (see below), have a red eye icon displayed with the monitor in the port icon column to indicate so.
• There are two buttons on the title bar at the top right:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log out: clicking this button (or pressing F8) closes the OSD display and logs you out of the KH1508i / KH1516i session.</td>
<td></td>
</tr>
<tr>
<td>Close: clicking this button (or pressing [Esc]) closes the OSD display but does not log you out of the session. You can bring the display back with the OSD hotkeys (see OSD Hotkey, page 81).</td>
<td></td>
</tr>
</tbody>
</table>

The administrator can also use this page to enable/disable Quick View status for selected ports, and to create, modify, or delete names for each of the ports.

Quick View Ports

Selecting certain ports as Quick View ports is a way of limiting which ports are included when the KH1508i / KH1516i is in auto scan mode. If the KH1508i / KH1516i is configured to only auto scan ports that have Quick View status (see Scan Select, page 81), designating a port as a Quick View port in this dialog box means that it will be included when auto scanning is in effect.

The spacebar toggles a port's Quick View status. To select/deselect a port, highlight it and press the spacebar. When a port has been selected as a Quick View port, a red eye icon displays with the monitor icon in the port icon column. When a port isn't selected, there is no red eye icon in the column.
The List Function

The List Function lets you broaden or narrow the scope of which ports the OSD displays (lists) in the Main Screen. To invoke the List Function, click the arrow at the upper right corner of the panel, or press [F3]:

![List Function Interface](image)

The screen changes to allow you to choose the ports that will be listed:

![Selected Ports](image)
Chapter 7. Windows Client Port Operation

The drop down list on the left offers four fixed choices as shown in the table, below:

<table>
<thead>
<tr>
<th>Choice</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>Lists all of the ports on the installation.</td>
</tr>
<tr>
<td>Powered On</td>
<td>Lists only the ports that have their attached devices powered on.</td>
</tr>
<tr>
<td>Quick View</td>
<td>Lists only the ports that have been selected as Quick View ports.</td>
</tr>
<tr>
<td>Quick View + Powered On</td>
<td>Lists only the ports that have been selected as Quick View Ports (see p. 93), and that have their attached devices Powered On.</td>
</tr>
</tbody>
</table>

The text input box on the right allows you to key in a search condition so that only port names that match what you key in show up in the List. Wildcards (?) and *) are acceptable, so that more than one port can show up in the list. For example, if you key in Rn*, both RnD 01 and RnD 02 show up in the list, as shown in the screenshot, below:

- After you key in your string, either click the binoculars to the right of the box, or press [Enter].
- To go back to the default view, erase the string and either click the binoculars to the right of the box, or press [Enter].
- To dismiss the List function, click the arrow or press [F3].
Port Names

To help remember which computer is attached to a particular port, every port can be given a name. This field allows the Administrator to create, modify, or delete port names. To configure a port name:

1. Click once on the port you want to edit, then either press [F2], or click again on the highlight bar.

   **Note:** This is not a double click. It involves two separate clicks. A double click will switch you to the device attached to the port.

After a second or two, the bar changes to a text input box:

2. Key in the new Port Name, or modify/delete the old one.
3. When you have finished editing the port name, click anywhere outside of the input box to complete the operation.
Port Operation

Once you select a port on the OSD Main Screen its screen comes up on your monitor, and your keyboard and mouse input affects the remote system.

Note: The administrator selects which ports are accessible to each user with the User Management function (see page 65 for details).

The OSD Toolbar

The OSD provides a toolbar to help you control the KH1508i / KH1516i from within the captured port. To bring up the toolbar, tap the OSD Hotkey twice (Scroll Lock is the default OSD Hotkey). The toolbar appears at the upper left corner of the screen:

- Depending on the settings that were selected under ID Display (see The Configuration Page, page 80), the Port Number and/or the Port Name display at the right of the toolbar.
- When the toolbar displays, mouse input is confined to the toolbar area.
- Keyboard input has no effect on the computer connected to the port. To carry out operations on the computer connected to the port, close the toolbar by clicking the X on it, or by pressing [Esc]. You can also recall the OSD (see below), and select the port again.
- While keyboard input has no effect on the computer connected to the port, you can use the keyboard to perform the following port operation functions, however:
  - Skip Mode port switching – see Skip Mode, page 104 for details.
  - Auto Scanning – see Invoking Auto Scan, page 103 for details.

Recalling the OSD

To dismiss the toolbar and bring back the OSD display (the Main, Configuration, and Administration pages), do one of the following:

- Tap the OSD Hotkey once;
- From the toolbar click the icon that brings up the OSD (see page 99).

The OSD Toolbar closes, and the main OSD display reappears.
# OSD Hotkey Summary Table

The following table presents a summary of the OSD Hotkey actions. To set the OSD Hotkey, see *OSD Hotkey*, page 81.

<table>
<thead>
<tr>
<th>To...</th>
<th>When...</th>
<th>Do This...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open the Toolbar</td>
<td>The OSD Toolbar is not open.</td>
<td>Click the OSD Hotkey twice.</td>
</tr>
<tr>
<td>Open the OSD</td>
<td>The OSD Toolbar is open.</td>
<td>Click the OSD Hotkey once.</td>
</tr>
<tr>
<td>Open the OSD</td>
<td>The OSD Toolbar is not open.</td>
<td>Click the OSD Hotkey three times.</td>
</tr>
</tbody>
</table>

## OSD Toolbar Icons

The meanings of the toolbar icons are explained in the table below.

- ![Icon](image) Click to toggle the display between color and grayscale. Grayscale speeds up video transfer over slower networks by decreasing the amount of video information being transmitted.
- ![Icon](image) Click to skip to the first accessible port on the entire installation without having to invoke the OSD.
- ![Icon](image) Click to skip to the first accessible port previous to the current one without having to invoke the OSD.
- ![Icon](image) Click to begin Auto Scan Mode. The KH1508i / KH1516i automatically switches among the ports that were selected for Auto Scanning under the Configuration Scan Select function (see Scan Select, page 81). This allows you to monitor their activity without having to switch among them manually.
- ![Icon](image) Click to skip from the current port to the next accessible one without having to invoke the OSD.
- ![Icon](image) Click to skip from the current port to the last accessible port on the entire installation without having to invoke the OSD.
- ![Icon](image) Click to bring up the OSD.
- ![Icon](image) Click to close the toolbar.
- ![Icon](image) Click to logout and exit the Windows Client application.
- ![Icon](image) Click to invoke Panel Array Mode (see page 100).
- ![Icon](image) Switches the Cat5 cable length between the Short, Medium, and Long settings (see I/O Modules, page 78 for details). The length of the line displayed changes according to the setting.
Panel Array Mode

Clicking on the OSD Toolbar's Panel icon invokes Panel Array Mode. Under this mode, the OSD divides your screen into a 4 x 4 grid of 16 panels:

- Each panel represents one of the KH1508i / KH1516i's ports. Starting with Port 1 at the upper left; going from left to right; top to bottom; Port 16 is at the lower right.
- When the Array is first invoked, it scans through each of the ports that were selected for Auto Scanning under the Configuration page's Scan Select function (see page 81), and displays information about the port (port name, resolution, on line status, port access status), at the bottom of the panel.
- The number of panels in the array (16, 9, 4, or 1) can be selected by clicking Show More Ports (+), and Show Fewer Ports (-) on the panel array toolbar.
- If the computer connected to a port is on line, its screen displays in its panel, otherwise the panel is blank.
- Only ports that are accessible to the currently logged in user display (see Port Access, page 67). All other panels are blank.
- If you move the mouse pointer over a panel, information about the port displays at the bottom of the screen.
- You can access a computer connected to a port by moving the mouse pointer over its panel and clicking. You switch to the computer exactly as if you had selected it from the OSD Main screen.
Panel Array Toolbar

The panel array toolbar, at the lower right of the screen, provides shortcut navigation and control of the panel array as described in the table below:

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Arrow Left]</td>
<td>Click and drag to move the toolbar to another position on the screen.</td>
</tr>
<tr>
<td>![Pause]</td>
<td>Pause panel scanning, leaving the focus on the panel that currently has it.</td>
</tr>
<tr>
<td>![Back]</td>
<td>Move back four panels.</td>
</tr>
<tr>
<td>![Backward]</td>
<td>Move to the previous panel.</td>
</tr>
<tr>
<td>![Forward]</td>
<td>Move to the next panel.</td>
</tr>
<tr>
<td>![Fast Forward]</td>
<td>Move ahead four panels.</td>
</tr>
<tr>
<td>![Plus]</td>
<td>Increase the number of panels in the array.</td>
</tr>
<tr>
<td>![Minus]</td>
<td>Decrease the number of panels in the array.</td>
</tr>
<tr>
<td>![Aspect Ratio]</td>
<td>Toggle 4/3 aspect ratio.</td>
</tr>
<tr>
<td>![Close]</td>
<td>Exit Panel Array mode.</td>
</tr>
</tbody>
</table>

**Note:** For issues affecting multiple user operation in Panel Array Mode, see *Multiuser Operation*, page 102.
Multiuser Operation

The KH1508i / KH1516i supports multiuser operation. Up to 32 users can log in at the same time. When multiple users simultaneously access the KH1508i / KH1516i switch from remote consoles, the rules of precedence that apply are shown in the following table:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>• Once a user invokes the OSD, no other user can invoke it until the original user closes it.</td>
</tr>
<tr>
<td>Auto Scan Mode</td>
<td>• If a user has invoked Auto Scan Mode (see Auto Scanning, page 103), but the OSD has not been invoked, another user can interrupt Auto Scan Mode by invoking the OSD.</td>
</tr>
</tbody>
</table>
| Panel Array Mode     | • When a user has invoked Panel Array Mode (see page 100), all successive users automatically enter Panel Array Mode. Panel Array Mode continues until the original user stops it. (Administrators can override Panel Array Mode.)
                       | • Only the user who starts Panel Array Mode can use the Skip Mode (see page 104) function. |
                       | • Only the user who starts Panel Array Mode and users with administrator privileges can switch ports. Other users automatically switch to the ports that the original user selects. |
                       | **Note:** If a user does not have access rights to the port that the original user switches to, that user will not be able to view the port. |
                       | • Individual users can increase or decrease the number of panels they wish to view in Panel Array Mode; however, the picture quality may decrease as the number of panels decreases. |

**Note:** We recommend that the user who starts Panel Array Mode set it to display at least four panels; otherwise, it is possible that other users may receive only part of the picture.
Chapter 7. Windows Client Port Operation

Keyboard Hotkey Operation

Keyboard hotkey combinations allow you to provide KVM focus to a port directly from the keyboard. The KH1508i / KH1516i provides the following hotkey features:

- Auto Scanning
- Skip Mode Switching

The hotkeys are: A and P for Auto Scanning; and the Arrow Keys for Skip Mode.

Note: 1. In order for hotkey operations to take place, the OSD Toolbar must be visible (see Port Operation, page 98). To use the keys designated as hotkeys (i.e. A, P, etc.) for normal, non-hotkey purposes, you must first close the toolbar.

2. For issues affecting multiple user operation in Auto Scan Mode, see Multiuser Operation, page 102.

Auto Scanning

The Auto Scan function automatically switches among all the ports that are accessible to the currently logged on user at regular intervals, so that the user can monitor their activity automatically. (See Scan Select, page 81, for information regarding accessible ports.)

Setting the Scan Interval

The amount of time Auto Scan dwells on each port is set with the Scan Duration setting (see page 81).

Invoking Auto Scan

To start Auto Scanning, tap the A key. The Auto Scan function cycles through the ports in order - starting from the first port on the installation. An S appears in front of the Port ID Display to indicate that the port is being accessed under Auto Scan Mode.
Pausing Auto Scan

While you are in Auto Scan Mode, you can pause the scanning in order to keep the focus on a particular computer by pressing P. During the time that Auto Scanning is paused, the S in front of the Port ID blinks On and Off.

Pausing when you want to keep the focus on a particular computer is more convenient than Exiting Auto Scan Mode because when you Resume scanning, you start from where you left off. If, on the other hand, you were to exit and restart Auto Scan Mode, the scanning would start from the very first computer on the installation. To resume Auto Scanning, press any key except Esc or the Spacebar. Scanning continues from where it left off.

Exiting Auto Scan

While Auto Scan Mode is in effect, ordinary keyboard functions are suspended. You must exit Auto Scan Mode in order to regain normal control of the keyboard. To exit Auto Scan Mode press Esc or the Spacebar. Auto Scanning stops when you exit Auto Scan Mode.

Skip Mode

Skip Mode allows you to switch ports in order to monitor the computers manually. You can dwell on a particular port for as long or as little as you like - as opposed to Auto Scanning, which automatically switches after a fixed interval. The Skip Mode hotkeys are the four Arrow keys. Their operation is explained in the table below:

<table>
<thead>
<tr>
<th>Arrow</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>←</td>
<td>Skips from the current port to the first accessible port previous to it. (See Scan Select, page 81, for information regarding accessible ports.)</td>
</tr>
<tr>
<td>→</td>
<td>Skips from the current port to the first accessible port that comes after it.</td>
</tr>
<tr>
<td>↑</td>
<td>Skips from the current port to the very first accessible port on the installation.</td>
</tr>
<tr>
<td>↓</td>
<td>Skips from the current port to the very last accessible port on the installation.</td>
</tr>
</tbody>
</table>
Chapter 7. Windows Client Port Operation

Keyboard and Mouse Considerations

Keystrokes
Except for [Alt + Tab] and [Ctrl + Alt + Del], all keyboard input is sent to the remote system. The above two chorded key combinations are retained on the local system to switch among applications and to recover from disaster. In order to provide the [Alt + Tab] and [Ctrl + Alt + Del] functions on the remote system, Function keys (F1 - F12) can be selected as substitute keys for both the Alt and Ctrl keys.

For example, the F11 key could substitute for the Ctrl key and the F12 key could substitute for the Alt key, in which case [F12 + Tab] substitutes for [Alt + Tab]; and [F11 + F12 + Del] substitutes for [Ctrl + Alt + Del]. See Hotkey Setup, page 85, for details on setting up a substitute key.

Note: 1. While any key may be used as a Substitute key, you must not use one that is being used as the first position Hotkey for another action.

2. When the KH1508i / KH1516i is being accessed with Win 98 under Full Screen Mode, if you mistakenly press Ctrl + Alt + Del, you will have to exit the Windows Client (by clicking the arrow on the Windows Client control panel), and restart the Windows Client from the KH1508i / KH1516i Main Web Page.
Mouse Synchronization

Until you close the KH1508i / KH1516i connection, mouse movements have no effect on your local system, but instead are captured and sent to the remote system.

From time to time, especially if you change video resolution, the local mouse movement may no longer be synchronized with the remote system's mouse pointer. There are three quick methods that can be used to bring the two pointers back into sync:

- Right-clicking on the hammer icon in the Windows Client Control Panel.
- Moving the mouse pointer into the Control Panel and back out again.
- Performing an Auto Sync with the Video Adjustment function (see Video Adjustment, page 87, for details).

If performing these actions does not resolve the problem, do the following:

1. Invoke the Adjust Mouse function with the Adjust Mouse hotkeys (see Adjust mouse, page 86, for details).

2. Move the local mouse pointer exactly on top of the remote mouse pointer and click.

If this procedure still does not help, you should set the mouse speed and acceleration for each problematic computer attached to the switch. see Additional Mouse Synchronization Procedures, page 147, for instructions.
Chapter 8
Java Client Port Operation

The Main Page

After you switch to the KH1508i / KH1516i (see page 60), the OSD comes up with the Main page displayed in the center of your monitor:

![OSD Main Page](image)

The OSD consists of three pages – Main, Configuration, and Administration. Administration and Configuration are discussed in Chapter 6.

The Main page is the same OSD Main page that appears when the Windows Client is invoked. For an explanation of this page refer to The Main Page, page 93.

Note: The Administration tab is disabled for users who don’t have administration permission.
The Java Client Control Panel

Instead of a control panel like the one that the Windows Client uses, the Java Client has a hidden control panel, located at the bottom center of the screen. The panel becomes visible when the mouse pointer is moved over it.

The Java Client Control Panel icons and their functions are described in the sections that follow.

Set Video Parameters
Clicking this button brings up the Video Adjustment dialog box:

It is similar to the Windows Client Video Adjustment dialog box. See Video Adjustment, page 87, for details.
**Keypad**

Some keyboard combinations cannot be captured and sent to the KH1508i / KH1516i. In order to implement their effects on the remote system, this function provides a one-click implementation of some common window control combinations.

**Mouse Synchronization**

At times the local mouse movement may lose sync with the remote mouse movement. The Mouse Synchronization function gets them back into sync. There are two methods available to bring the pointers into sync:

1. Click the Mouse Synchronization button; wait for the remote mouse pointer to move to the upper left corner of the screen; move your local mouse pointer directly on top of the remote pointer; and click.

2. Move your local mouse pointer over the Java Client Control Panel, and click.
The KH1508i / KH1516i supports multiple user logins, which can possibly give rise to access conflicts. To alleviate this problem, a message board feature, similar to an Internet chat program, allows users to communicate with each other.

When you click the Message Board icon on the Java Client Control Panel (see page 108), a screen similar to the one below appears:

(Continues on next page.)
The Message Board Button Bar

The buttons on the Button Bar are toggles. Their actions are described in the table below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Enable/Disable" /></td>
<td><strong>Enable/Disable</strong> Chat. When disabled, messages posted to the board are not displayed. The button is shadowed when Chat is disabled. The icon displays next to the user's name in the User List panel when the user has disabled Chat.</td>
</tr>
<tr>
<td><img src="image" alt="Occupy/Release" /></td>
<td><strong>Occupy/Release</strong> Keyboard/Video/Mouse. When you Occupy the KVM, other users cannot see the video, and cannot input keyboard or mouse data. The button is shadowed when the KVM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KVM.</td>
</tr>
<tr>
<td><img src="image" alt="Occupy/Release" /></td>
<td><strong>Occupy/Release</strong> Keyboard/Mouse. When you Occupy the KM, other users can see the video, but cannot input keyboard or mouse data. The button is shadowed when the KM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KM.</td>
</tr>
</tbody>
</table>
Messages that users post to the board - as well as system messages - display in the Message Display panel. If you disable Chat, however, messages that get posted to the board won't appear.

Key in the messages that you want to post to the board in the Compose panel. Click Send, to post the message to the board.

The names of all the logged in users appear in the User List panel.

- By default, messages are posted to all users. To post a message to one individual user, select the user's name before sending your message.
- If a user's name is selected, and you want to post a message to all users, select All Users before sending your message.
- If a user has disabled Chat, its icon displays before the user's name to indicate so.
- If a user has occupied the KVM or the KM, its icon displays before the user's name to indicate so.
- To Hide/Unhide the User List panel, click on the arrows in the panel separator.
Lock Key LEDs and Resolution

These LEDs show the Num Lock, Caps Lock, and Scroll Lock status of the remote computer. They turn Green when the Lock status is On. Click on the icon to toggle the status.

**Note:** When you first connect, the LED display may not be accurate. To be sure, click on the LEDs to set them.

The video resolution of the device connected to the remote port displays directly below the Lock LEDs.

Switch Screen Mode

Clicking this button enables or disables Full Screen Mode. (By default the Java Client opens in Full Screen Mode.)

About

Clicking this button opens the About dialog box, which displays the Java Client Version information. Click the OK button to close the dialog box.

Send Ctrl+Alt+Del

Clicking this button sends a Ctrl+Alt+Del signal to the remote system.

Help

Clicking this button brings up the online help screen for the Java Client.

Exit

Clicking the Exit button terminates the Java Client session.
Port Operation

Java Client port operation is the same as for the Windows Client. See *Port Operation*, page 98, for details.

Panel Array Mode

This is very similar to the Windows Client Panel Array Mode (see page 100 for details), except for some differences in the toolbar. The Java Client Panel Array Mode Toolbar is described in the table below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="pause.png" alt="Pause" /></td>
<td>Pause panel scanning, leaving the focus on the panel that currently has it.</td>
</tr>
<tr>
<td><img src="move_back.png" alt="Move Back" /></td>
<td>Move back four panels.</td>
</tr>
<tr>
<td><img src="move_previous.png" alt="Move Previous" /></td>
<td>Move to the previous panel.</td>
</tr>
<tr>
<td><img src="move_next.png" alt="Move Next" /></td>
<td>Move to the next panel.</td>
</tr>
<tr>
<td><img src="move_ahead.png" alt="Move Ahead" /></td>
<td>Move ahead four panels.</td>
</tr>
<tr>
<td><img src="increase.png" alt="Increase" /></td>
<td>Increase the number of panels in the array.</td>
</tr>
<tr>
<td><img src="decrease.png" alt="Decrease" /></td>
<td>Decrease the number of panels in the array.</td>
</tr>
<tr>
<td><img src="toggle_aspect.png" alt="Toggle Aspect" /></td>
<td>Toggle 4/3 aspect ratio.</td>
</tr>
<tr>
<td><img src="exit.png" alt="Exit" /></td>
<td>Exit Panel Array mode.</td>
</tr>
</tbody>
</table>

*Note:* When you click *Pause*, the Array stops scanning the ports. The button changes to an arrowhead and its caption changes to *Resume*. To resume scanning, click the Resume button.
Chapter 8. Java Client Port Operation

Keyboard Hotkey Operation

Keyboard hotkey operation is the same as for the Windows Client. See *Keyboard Hotkey Operation*, page 103, for details.
Chapter 9
The Log File

The Main Screen

The KH1508i / KH1516i logs all the events that take place on it. To view the contents of the log file, click the Log icon at the left of the web page. A screen similar to the one below appears:

A maximum of 512 events are stored in the log file. To clear the log file, click on the Clear Log icon at the lower right of the screen.

Note: The Log File is a temporary file that is erased when the KH1508i / KH1516i is turned off or loses power. It is recommended that you install the Log Server to backup the contents of the log file.
Chapter 10

The Log Server

The Windows-based Log Server is an administrative utility that records all the events that take place on selected KH1508i / KH1516i units and writes them to a searchable database. This chapter describes how to install and configure the Log Server.

Installation

1. From the computer that you want to use as the Log Server, open your browser and log into the KH1508i / KH1516i (see Logging In, page 51).
2. Click the Log Server button at the left of the web page to start the Log Server installation program.
3. If any security warning dialog boxes appear, ignore them and click Run or Open.

   **Note:** If the browser cannot run the file, save it to disk, instead, and run the file from your disk.

When you run the installation program (LogSetup.exe), the Log Server Setup screen comes up:

4. Click Next. Then follow the on-screen instructions to complete the installation and have the Log Server program icon placed on your desktop.
Starting Up

To bring up the Log Server, either double click the program icon, or key in the full path to the program on the command line. The first time you run it, a screen similar to the one below appears:

Note: 1. The MAC address of the computer that will contain the Log Server Events database must be specified on the Service Configuration page of the Administrator Utility (see page 69).

2. The Log Server requires the Microsoft Jet OLEDB 4.0 driver in order to access the database.

The screen is divided into three components:

- A Menu Bar at the top
- A panel to display a list of KH1508i / KH1516i units in the middle (see Overview, page 125).
- A panel to display an Events List at the bottom (see Overview, page 125).

Each of the components is explained in the sections that follow.
The Menu Bar

The Menu bar consists of four items:

- Configure
- Events
- Options
- Help

These are discussed in the sections that follow.

**Note:** If the Menu Bar appears to be disabled, click in the KH1508i / KH1516i List window to enable it.

**Configure**

The Configure menu contains three items: Add, Edit, and Delete. They are used to add new KH1508i / KH1516i units to the KH1508i / KH1516i List, edit the information for units already on the list, or delete KH1508i / KH1516i units from the list.

- To add a KH1508i / KH1516i to the KH1508i / KH1516i List, click **Add**.
- To edit or delete a listed KH1508i / KH1516i, first select the one you want in the KH1508i / KH1516i List window, then open this menu and click **Edit** or **Delete**.

When you choose **Add** or **Edit**, a dialog box, similar to the one below appears:
A description of the fields is given in the table, below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>This can either be the IP address of the KH1508i / KH1516i or its DNS name (if the network administrator has assigned it a DNS name).</td>
</tr>
<tr>
<td>Port</td>
<td>The Port number assigned to the KH1508i / KH1516i (see Log Server, page 70).</td>
</tr>
<tr>
<td>Description</td>
<td>This field is provided so that you can put in a descriptive reference for the unit to help identify it.</td>
</tr>
<tr>
<td>Limit</td>
<td>This specifies the number of days that an event should be kept in the Log Server's database before it expires and it is cleared out.</td>
</tr>
</tbody>
</table>

Fill in or modify the fields, then click **OK** to finish.

**Events**

The Events Menu has two items: Search and Maintenance.

**Search**

Search allows you to search for events containing specific words or strings. When you access this function, a screen similar to the one below appears:
A description of the items is given in the table below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>New search</td>
<td>This is one of three radio buttons that define the scope of the search. If it is selected, the search is performed on all the events in the database for the selected KH1508i / KH1516i.</td>
</tr>
<tr>
<td>Search last results</td>
<td>This is a secondary search performed on the events that resulted from the last search.</td>
</tr>
<tr>
<td>Search excluding last results</td>
<td>This is a secondary search performed on all the events in the database for the selected KH1508i / KH1516i excluding the events that resulted from the last search.</td>
</tr>
<tr>
<td>Server List</td>
<td>KH1508i / KH1516i units are listed according to their IP address. Select the unit that you want to perform the search on from this list. You can select more than one unit for the search. If no units are selected, the search is performed on all of them.</td>
</tr>
<tr>
<td>Priority List</td>
<td>Sets the level for how detailed the search results display should be. 1 is the most general; 3 is the most specific.</td>
</tr>
<tr>
<td>Start Date</td>
<td>Select the date that you want the search to start from. The format follows the MM/DD/YYYY convention, as follows:</td>
</tr>
<tr>
<td></td>
<td>11/04/2005</td>
</tr>
<tr>
<td>Start Time</td>
<td>Select the time that you want the search to start from.</td>
</tr>
<tr>
<td>End Date</td>
<td>Select the date that you want the search to end at.</td>
</tr>
<tr>
<td>End Time</td>
<td>Select the time that you want the search to end at.</td>
</tr>
<tr>
<td>Pattern</td>
<td>Key in the pattern that you are searching for here. The multiple character wildcard (%) is supported. E.g., h%ds would match hands and hoods.</td>
</tr>
<tr>
<td>Results</td>
<td>Lists the events that contained matches for the search.</td>
</tr>
<tr>
<td>Search</td>
<td>Click this button to start the search.</td>
</tr>
<tr>
<td>Print</td>
<td>Click this button to print the search results.</td>
</tr>
<tr>
<td>Exit</td>
<td>Click this button to exit the Search dialog box.</td>
</tr>
</tbody>
</table>
Maintenance
This function allows the administrator to perform manual maintenance of the database. He can use it to erase specified records before the expiration time that was set with the Limit setting of the Edit function (see page 122).

Options
This menu has a single item: Retry.

Retry allows you to set the number of seconds that the Log Server should wait before attempting to connect if its previous attempt to connect failed. When you click this item, a dialog box, similar to the one below, appears:

![Retry dialog box]

Key in the number of seconds, then click OK to finish.

Help
From the Help Menu, click Contents to access the online Windows Help file. The help file contains instructions about how to setup, operation and troubleshoot the Log Server.
Chapter 10. The Log Server

The Log Server Main Screen

Overview

The Log Server Main Screen is divided into two main panels.

- The upper (List) panel lists the KH1508i / KH1516i units that have been selected for the Log Server to track (see Configure, page 121).
- The lower (Event) panel displays the log events for the currently selected KH1508i / KH1516i (the highlighted one - if there are more than one). To select a KH1508i / KH1516i unit in the list, simply click on it.
The List Panel

The List panel contains six fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recording</td>
<td>Determines whether the Log Server records log events for this KH1508i / KH1516i or not. If the Recording checkbox is checked, the field displays <em>Recording</em>, and log events are recorded. If the Recording checkbox is not checked, the field displays <em>Paused</em>, and log events are not recorded. <strong>Note:</strong> Even though a KH1508i / KH1516i is not the currently selected one, if its Recording checkbox is checked, the Log Server will still record its log events.</td>
</tr>
<tr>
<td>Address</td>
<td>This is the IP Address or DNS name that was given to the KH1508i / KH1516i when it was added to the Log Server (see Configure, page 121).</td>
</tr>
<tr>
<td>Port</td>
<td>This is the Port number assigned to the KH1508i / KH1516i (see Configure, page 121).</td>
</tr>
<tr>
<td>Connection</td>
<td>If the Log Server is connected to the KH1508i / KH1516i, this field displays <em>Connected</em>. If it is not connected, this field displays <em>Waiting</em>. This means that the Log Server's MAC address has not been set properly. It needs to be set on the Service Configuration page of the Administrator Utility (see page 69).</td>
</tr>
<tr>
<td>Days</td>
<td>This field displays the number of days that the KH1508i / KH1516i's log events are to be kept in the Log Server's database before expiration (see Configure, page 121).</td>
</tr>
<tr>
<td>Description</td>
<td>This field displays the descriptive information given for the KH1508i / KH1516i when it was added to the Log Server (see Configure, page 121).</td>
</tr>
</tbody>
</table>

The Event Panel

The lower panel displays log events for the currently selected KH1508i / KH1516i. Note that if there are more than one KH1508i / KH1516i units, even though they aren't currently selected, if their Recording checkbox is checked, the Log Server records their log events and keeps them in its database.
Chapter 11
AP Operation

Overview

In some cases, the Administrator may not want the KH1508i / KH1516i to be available via browser access. AP versions of the Windows Client and the Java Client are provided to enable direct access of the KH1508i / KH1516i without having to go through a browser.

The programs are initially downloaded from the browser page. After they have been downloaded by the Users, the Administrator can disable browser access (see Working Mode, page 77).

The Windows Client

Installation

To install the Windows Client on your computer, do the following:

1. Log into the KH1508i / KH1516i with your browser, and click the second Windows Client button (the one with the arrow). A screen similar to the one below appears:

   ![File Download - Security Warning](image)

   **Do you want to run or save this file?**

   - Name: WinClient.exe
   - Type: Application, 475/0
   - From: 16.0.128.67

   **Run** | **Save** | **Cancel**

   *While files from the Internet can be useful, this file type can potentially harm your computer. If you do not trust the source, do not run or save this software.*

   **What is the risk?**

2. Click Save. In the dialog box that comes up specify a location on your hard disk to save it to.
Starting Up

To connect to the KH1508i / KH1516i, go to the location on your hard disk that you saved the Windows Client program to, and double-click its icon (WinClient.exe) to bring up the Windows Client Connection Screen:

![Connection Screen](image)

Note: You must have DirectX 7.0 or higher installed on your computer. If not, the Client program will not load.

(Continues on next page.)
A description of the Connection Screen is given in the following table:

| Menu Bar | The Menu Bar contains three items: File, Tools, and Help.  
1. The File Menu allows the operator to Create, Save, and Open user created Work files (see page 130 for details).  
2. The Tools Menu contains two entries: Keyboard and Config. (see page 130 for details). |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Server List</td>
<td>Each time the WinClient.exe file is run, it searches the User's local LAN segment for KH1508i / KH1516i units, and lists whichever ones it finds in this box. If you want to connect to one of these units, double-click it.</td>
</tr>
</tbody>
</table>
| Server | This area is used when you want to connect to a KH1508i / KH1516i at a remote location. You can drop down the IP list box and select an address from the list. If the address you want isn't listed, you can key in the IP address you want. Then, key in the Port number in the Port field. If you don't know the Port number, then contact the Administrator.  
When the IP address and Port number for the unit you wish to connect to have been specified, click Connect to start the connection. When you have finished with your session, Click Disconnect to end the connection. |
| Message List | Lists status messages regarding the connection to the KH1508i / KH1516i. |
| Switch to Remote View | Once contact with a KH1508i / KH1516i has been established, this button becomes active. Click it to switch and take over console control of the unit that is attached to the KH1508i / KH1516i.  
The screen output of the unit appears on your monitor. Your keystrokes and mouse movements are captured and sent to the KH1508i / KH1516i to be executed on the attached unit.  
If the KH1508i / KH1516i is connected to a KVM switch, you can control the switch and the computers connected to it just as if you were connected locally. |
| Change Password | This button becomes active after a connection to a KH1508i / KH1516i unit has been established. It allows the User to change the password used to log in to the KH1508i / KH1516i. |
The File Menu
The File Menu allows the operator to Create, Save, and Open user created Work files. A Work File consists of all the information specified in a Client session. This includes the Server List and Server IP list items, as well as the Hotkey settings.

Whenever a user runs the Client program, it opens with the values contained in the current work file. The current work file consists of the values that were in effect the last time the program was closed.

The File menu consists of three items, as follows:

<table>
<thead>
<tr>
<th>New</th>
<th>Allows the user to create a named work file so its values will not be lost, and it will be available for future recall.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Allows the user to open a previously saved work file and use the values contained in it.</td>
</tr>
<tr>
<td>Save</td>
<td>Allows the user to save the values presently in effect as the current work file.</td>
</tr>
</tbody>
</table>

The Tools Menu
Tools menu operations are performed after you connect, but before you switch to remote view. There are two entries on the Tools Menu: Keyboard and Config. They are explained in the sections that follow.

Keyboard
Various configuration actions related to the keyboard, video, and mouse can be performed via hotkey combinations. The Hotkey Setup utility is accessed by opening the Tools menu and selecting Keyboard. The Hotkey Setup Screen that appears is essentially the same dialog box discussed in the browser-based Windows Client chapter. See Hotkey Setup, page 85, for details.
Chapter 11. AP Operation

Config
When you select Config, a screen similar to the one below appears:

- If Full Screen Mode is enabled (there is a checkmark in the box), the remote display fills the entire screen of your local monitor.
- If Full Screen Mode is not enabled (there is no checkmark in the box), the remote display appears as a window on your desktop. If the remote screen is larger than what is able to fit in the window, move the mouse pointer to the screen border that is closest to the area you want to view and the screen will scroll.
- If Keep Screen Size is enabled (there is a checkmark in the box), the remote screen is not resized.
  - If the remote resolution is smaller, its display appears as a window centered on your screen.
  - If the remote resolution is larger, its display is centered on your screen. To access the areas that are off screen, move the mouse to the corner of the screen that is closest to the area you want to view and the screen will scroll.
- If Keep Screen Size is not enabled (there is no checkmark in the box), the remote screen is resized to fit the resolution of your local monitor.
Connecting

To connect to a KH1508i / KH1516i unit:

1. From the Server List box, double-click the device that you wish to connect to. Or, specify the IP address and port number in the Server IP and Port input boxes, and then Click Connect. The Login dialog box appears:

   ![Login Window]

   - User Name:
   - Password:
   - OK
   - Cancel

2. Key in a valid Username and Password, and then click OK.

   The program attempts to connect to the selected KH1508i / KH1516i unit. While it does so, you can check the Message List window for status messages regarding the operation's progress.

3. Once contact with the KH1508i / KH1516i has been established, the Switch to Remote View button becomes active. Click it to connect to the KH1508i / KH1516i and take over console control of the unit that is connected to it.
Chapter 11. AP Operation

Operation
Once a connection to the KH1508i / KH1516i has been established, the remote system's video output is captured and displayed on your monitor. At the same time, your local keystroke and mouse input is captured and sent to the remote system.

The look and feel of the AP Windows client operation is the same as for the browser version of the Windows client. Refer back to Chapter 7, for details.

Ending the Session
After you log out of the KH1508i / KH1516i, you return to the Connection dialog box. Click Disconnect to end the session.
The Java Client

Installation
To install the Java Client on your computer, do the following:

1. Log into the KH1508i / KH1516i with your browser, and click the second Java Client button (the one with the arrow). A screen similar to the one below appears:

   ![Java Client Installation Screen]

2. Click Save. In the dialog box that comes up specify a location on your hard disk to save it to.

Starting Up
To connect to the KH1508i / KH1516i do the following:

1. Open a command line window and change to the directory where the Java Client file (iKVMmain.jar) is at.

2. From the command line, issue the following command:

   ```
   java - jar iKVMmain.jar
   ```

   **Note:** You must install Java version 1.4.2 or higher before running the Java Client. It will not work with earlier versions of Java.

(Continues on next page.)
(Continued from previous page.)

The Address Input dialog box appears:

![Address Input Dialog Box]

3. Key in the IP address for the unit you want to connect to - including a forward slash followed by the login string.

**Note:** For security purposes, the login string (set by the administrator), must be specified correctly as part of the IP address. The system administrator may change the string from time to time to thwart unauthorized access attempts. Be sure you have the correct string when you attempt to connect.

After you establish a connection, a Login dialog box appears:

![Login Dialog Box]

4. Provide a valid Username and Password, and then click **OK**.

Once the authentication procedure completes successfully, the KH1508i / KH1516i main page displays on your monitor.
**Operation**

The look and feel of the AP Java client operation is the same as for the browser version of the Java client. Refer back to Chapter 8 for details.
Chapter 12
Keyboard Emulation

Mac Keyboard

The PC compatible (101/104 key) keyboard can emulate the functions of the Mac keyboard. The emulation mappings are listed in the table below.

<table>
<thead>
<tr>
<th>PC Keyboard</th>
<th>Mac Keyboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Shift]</td>
<td>Shift</td>
</tr>
<tr>
<td>[Ctrl]</td>
<td>Ctrl</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [1]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [2]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [3]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [4]</td>
<td></td>
</tr>
<tr>
<td>[Alt]</td>
<td>Alt</td>
</tr>
<tr>
<td>[Print Screen]</td>
<td>F13</td>
</tr>
<tr>
<td>[Scroll Lock]</td>
<td>F14</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>=</td>
<td>Return</td>
</tr>
<tr>
<td>[Backspace]</td>
<td>Delete</td>
</tr>
<tr>
<td>[Insert]</td>
<td>Help</td>
</tr>
<tr>
<td>[Ctrl] [Esc]</td>
<td>F15</td>
</tr>
</tbody>
</table>

**Note:** When using key combinations, press and release the first key (Ctrl), then press and release the activation key.
Sun Keyboard

The PC compatible (101/104 key) keyboard can emulate the functions of the Sun keyboard when the Control key [Ctrl] is used in conjunction with other keys. The corresponding functions are shown in the table below.

<table>
<thead>
<tr>
<th>PC Keyboard</th>
<th>Sun Keyboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Ctrl] [T]</td>
<td>Stop</td>
</tr>
<tr>
<td>[Ctrl] [F2]</td>
<td>Again</td>
</tr>
<tr>
<td>[Ctrl] [F3]</td>
<td>Props</td>
</tr>
<tr>
<td>[Ctrl] [F4]</td>
<td>Undo</td>
</tr>
<tr>
<td>[Ctrl] [F5]</td>
<td>Front</td>
</tr>
<tr>
<td>[Ctrl] [F6]</td>
<td>Copy</td>
</tr>
<tr>
<td>[Ctrl] [F7]</td>
<td>Open</td>
</tr>
<tr>
<td>[Ctrl] [F8]</td>
<td>Paste</td>
</tr>
<tr>
<td>[Ctrl] [F9]</td>
<td>Find</td>
</tr>
<tr>
<td>[Ctrl] [F10]</td>
<td>Cut</td>
</tr>
<tr>
<td>[Ctrl] [1]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [2]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [3]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [4]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [H]</td>
<td>Help</td>
</tr>
</tbody>
</table>

|                | |  |
|                | |  |

**Note:** When using key combinations, press and release the first key (Ctrl), then press and release the activation key.
Appendix

Safety Instructions

General

- Read all of these instructions. Save them for future reference.
- Follow all warnings and instructions marked on the device.
- Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- Do not use the device near water.
- Do not place the device near, or over, radiators or heat registers.
- The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built in enclosure unless adequate ventilation has been provided.
- Never spill liquid of any kind on the device.
- Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- The device is designed for IT power distribution systems with 230V phase-to-phase voltage.
- The device is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not attempt to defeat the purpose of the grounding-type plug. Always follow your local/national wiring codes.
- Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.
- If an extension cord is used with this device make sure that the total of the ampere ratings of all products used on this cord does not exceed the
extension cord ampere rating. Make sure that the total of all products plugged into the wall outlet does not exceed 15 amperes.

- To help protect your system from sudden, transient increases and decreases in electrical power, use a surge suppressor, line conditioner, or uninterruptible power supply (UPS).
- Position system cables and power cables carefully; Be sure that nothing rests on any cables.
- When connecting or disconnecting power to hot pluggable power supplies, observe the following guidelines:
  - Install the power supply before connecting the power cable to the power supply.
  - Unplug the power cable before removing the power supply.
  - If the system has multiple sources of power, disconnect power from the system by unplugging all power cables from the power supplies.
  - Never push objects of any kind into or through cabinet slots. They may touch dangerous voltage points or short out parts resulting in a risk of fire or electrical shock.
- Do not attempt to service the device yourself. Refer all servicing to qualified service personnel.
- If the following conditions occur, unplug the device from the wall outlet and bring it to qualified service personnel for repair.
  - The power cord or plug has become damaged or frayed.
  - Liquid has been spilled into the device.
  - The device has been exposed to rain or water.
  - The device has been dropped, or the cabinet has been damaged.
  - The device exhibits a distinct change in performance, indicating a need for service.
  - The device does not operate normally when the operating instructions are followed.
- Only adjust those controls that are covered in the operating instructions. Improper adjustment of other controls may result in damage that will require extensive work by a qualified technician to repair.
Appendix

Rack Mounting

- Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.
- Always load the rack from the bottom up, and load the heaviest item in the rack first.
- Make sure that the rack is level and stable before extending a device from the rack.
- Use caution when pressing the device rail release latches and sliding a device into or out of a rack; the slide rails can pinch your fingers.
- After a device is inserted into the rack, carefully extend the rail into a locking position, and then slide the device into the rack.
- Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.
- Ensure that proper airflow is provided to devices in the rack.
- Do not step on or stand on any device when servicing other devices in a rack.

When you contact us, please have the following information ready beforehand:

- Product model number, serial number, and date of purchase.
- Your computer configuration, including operating system, revision level, expansion cards, and software.
- Any error messages displayed at the time the error occurred.
- The sequence of operations that led up to the error.
- Any other information you feel may be of help.
# Troubleshooting

## Administration

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>After upgrading firmware, the KH1508i / KH1516i still appears to be using the old firmware version.</td>
<td>Your Internet browser is displaying cached web pages – not new ones. Clear your browser cache; delete all temporary Internet files and cookies, close the Internet browser, and then open a new instance of the browser.</td>
</tr>
<tr>
<td>The default network setting for the KH1508i / KH1516i is DHCP, but the network uses fixed IP addresses and doesn’t have a DHCP server.</td>
<td>Use the local console OSD’s F6 function to give the KH1508i / KH1516i a fixed IP address. See F6 IP, page 32, for details.</td>
</tr>
</tbody>
</table>

## General Operation

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Erratic Operation</td>
<td>Press and hold the Reset Switch (see page 7) for longer than three seconds.</td>

</tr>
<tr>
<td></td>
<td>2. Log out.</td>
</tr>
<tr>
<td></td>
<td>3. Log in.</td>
</tr>
</tbody>
</table>

* These solutions work for most common Sun VGA cards. If using them fails to resolve the problem, consult the Sun VGA card's manual.
Additional Mouse Synchronization Procedures
If the mouse synchronization procedures mentioned in the manual fail to resolve mouse pointer problems for particular computers, try the following:

**Note:** 1. These procedures are to be performed on the computers attached to the KH1508i / KH1516i's ports - not on the computer you are using to access the KH1508i / KH1516i.

2. In order for the local and remote mice to synchronize, you must use the generic mouse driver supplied with the Windows operating system. If you have a third party driver installed - such as one supplied by the mouse manufacturer - you must remove it.

1. Windows 2000:
   Set the mouse speed to the middle position; set the mouse acceleration to *None* (Control Panel → Mouse → Mouse Properties → Motion):

   ![Mouse Properties Window](image)

2. Windows XP / Windows Server 2003:
   Set the mouse speed to the middle position; disable *Enhance Pointer Precision* (Control Panel → Printers and Other Hardware → Mouse → Pointer Options):
3. Windows ME / Windows 95:
   Set the mouse speed to the middle position; disable mouse acceleration
   (click Advanced to get the dialog box for this).

4. Windows NT / Windows 98:
   Set the mouse speed to the slowest position.

5. Sun / Linux:
   Open a terminal session and issue the following command:
   
   Sun: xset m 1
   Linux: xset m 0

Trusted Certificates

Overview

When you try to log in to the device from your browser, a Security Alert message appears to inform you that the device’s certificate is not trusted, and asks if you want to proceed.

The certificate can be trusted, but the alert is triggered because the certificate’s name is not found on Microsoft list of Trusted Authorities. You have two options: 1) you can ignore the warning and click Yes to go on; or 2) you can install the certificate and have it be recognized as trusted.

- If you are working on a computer at another location, accept the certificate for just this session by clicking Yes.
- If you are working at your own computer, install the certificate on your computer (see below for details). After the certificate is installed, it will be recognized as trusted.
Installing the Certificate

To install the certificate, do the following:

1. In the Security Alert dialog box, click View Certificate. The Certificate Information dialog box appears:

   ![Certificate Information Dialog Box](image)

   **Note:** There is a red and white X logo over the certificate to indicate that it is not trusted.

2. Click Install Certificate.

3. Follow the Installation Wizard to complete the installation. Unless you have a specific reason to choose otherwise, accept the default options.

4. When the Wizard presents a caution screen:

   ![Security Warning Dialog Box](image)

   Click Yes.
5. Next, click **Finish** to complete the installation; then click **OK** to close the dialog box.

**Certificate Trusted**

The certificate is now trusted:

When you click *View Certificate*, you can see that the red and white X logo is no longer present – further indication that the certificate is trusted:
Supported Devices

The following table represents a list of supported devices that can be used on a KH1508i / KH1516i installation.

<table>
<thead>
<tr>
<th>Type</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Daisy Chain Switches</td>
<td>KH1508; KH1516; ACS1208A; ACS1216A</td>
</tr>
<tr>
<td>PON</td>
<td>PN0108; PN1216</td>
</tr>
<tr>
<td>Central Control</td>
<td>CC1000</td>
</tr>
</tbody>
</table>

OSD Factory Default Settings

The factory default settings are as follows:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSD Hotkey</td>
<td>[Scroll Lock] [Scroll Lock]</td>
</tr>
<tr>
<td>Port ID Display</td>

</tr>
<tr>
<td>Scan Duration</td>
<td>10 Seconds</td>
</tr>
<tr>
<td>Screen Blanker</td>
<td>0 Minutes (disabled)</td>
</tr>
<tr>
<td>Beeper</td>
<td>On</td>
</tr>
<tr>
<td>Accessible Ports</td>
<td>F (Full) For all Users on all Ports</td>
</tr>
</tbody>
</table>
Administrator Login Failure

If you are unable to perform an Administrator login (because the Username and Password information has become corrupted, or you have forgotten it, for example), there is a procedure you can use to clear the login information.

Note: Performing this procedure also returns all settings to their defaults.

To clear the login information (and return all settings to their defaults), do the following:

1. Power off the KH1508i / KH1516i and remove its housing.
2. Using a jumper cap, short the jumper on the IP module (the daughter card located at the rear-left of the unit, above the mainboard), labeled Default Password (J3).
3. Power on the switch.
4. Wait a few seconds. When the front panel LEDs flash, power off the switch.
5. Remove the jumper cap from J3.
6. Close the housing and power on the KH1508i / KH1516i.
   After powering on the unit, you can use the default Username and Password (see Overview, page 21), to log in.
Appendix

IP Module Firmware Upgrade Recovery

If a firmware upgrade procedure was interrupted due to a sudden power failure or loss of network connection, the ordinary firmware upgrade recovery procedures described in Firmware Upgrade Recovery, page 45, may not work for the IP module. In that case, to recover the IP module, do the following:

1. Power off the KH1508i / KH1516i and remove its housing.

2. Using a jumper cap, short the jumper on the IP module (the daughter card located at the rear-left of the unit, above the mainboard), labeled J2.

3. Power on the switch.
   The IP module will now work with the factory default firmware.

4. Do the firmware upgrade procedure again.

5. After the upgrade procedure completes: power off the switch; remove the jumper cap from J2; close the housing; and power the switch on again.
Limited Warranty

ALTUSEN warrants this product against defects in material or workmanship for a period of one (1) year from the date of purchase. If this product proves to be defective, contact ALTUSEN's support department for repair or replacement of your unit. ALTUSEN will not issue a refund. Return requests can not be processed without the original proof of purchase.

When returning the product, you must ship the product in its original packaging or packaging that gives an equal degree of protection. Include your proof of purchase in the packaging and the RMA number clearly marked on the outside of the package.

This warranty becomes invalid if the factory-supplied serial number has been removed or altered on the product.

This warranty does not cover cosmetic damage or damage due to acts of God, accident, misuse, abuse, negligence or modification of any part of the product. This warranty does not cover damage due to improper operation or maintenance, connection to improper equipment, or attempted repair by anyone other than ALTUSEN. This warranty does not cover products sold AS IS or WITH FAULTS.

IN NO EVENT SHALL ALTUSEN'S LIABILITY EXCEED THE PRICE PAID FOR THE PRODUCT. FURTHER, ALTUSEN SHALL NOT BE RESPONSIBLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OF THE PRODUCT, ITS ACCOMPANYING SOFTWARE, OR ITS DOCUMENTATION. ALTUSEN SHALL NOT IN ANY WAY BE RESPONSIBLE FOR, WITHOUT LIMITATION, LOSS OF DATA, LOSS OF PROFITS, DOWNTIME, GOODWILL, DAMAGE OR REPLACEMENT OF EQUIPMENT OR PROPERTY, AND ANY EXPENSES FROM RECOVERY, PROGRAMMING, AND REPRODUCTION OF ANY PROGRAM OR DATA.

ALTUSEN makes no warranty or representation, expressed, implied, or statutory with respect to its products, contents or use of this documentation and all accompanying software, and specifically disclaims its quality, performance, merchantability, or fitness for any particular purpose.

ALTUSEN reserves the right to revise or update its product, software or documentation without obligation to notify any individual or entity of such revisions, or update.

For details about extended warranties, please contact one of our dedicated value added resellers.
